Quick Reference Guide & Quick Install Guide
Handset cord
Ethernet cable
T46 Power Adapter
T46 Stand
T46 Wall Mount Bracket (not included)

Note: If you find anything missing, contact your system administrator.

Assembling the phone

1. Attach the stand.

2. Connect the handset and optional headset.

Insert the handset cord with the longer straight end into the back of the phone and affix into the channel.

Note: You can also mount the phone to a wall. Purchase of the optional T46G Wall mount bracket is required.

Note: The headset, Bluetooth USB Dongle BT40 and wireless headset adapter EHS36 must be purchased separately. The EXT port can also be used to connect the expansion module EXP40. For more information on how to use the EHS36, EXP40 and Bluetooth USB Dongle, refer to the respective Meet Your Device.
3. Connect to broadband and power.

You have two options for broadband and power connections. Your system administrator will advise you on which one to use.

Note: If inline power (PoE) is provided, you don’t need to connect the power adapter. Make sure the hub/switch is PoE-compliant.

Startup

When the One Talk phone is connected to the network and powered on, it automatically begins the initialization process. After startup, and confirming the 911 address, the phone is ready for use.

During initializing:
The Power light will start as a steady red light, will then blink, and then turn off when initialization is complete.
