INTRODUCTION

1.0 Package Contents
1.1 System Requirements
1.2 Features
1.3 Getting to Know Your Verizon Router
Verizon Router lets you transmit and distribute digital entertainment and information to multiple devices in your home/office.

Your Verizon Router supports networking using coaxial cables, Ethernet, or Wi-Fi, making it one of the most versatile and powerful routers available.
1.0/ PACKAGE CONTENTS

Your package contains:

• Verizon Router
• Power adapter
• Ethernet cable, three meters (white)

1.1/ SYSTEM REQUIREMENTS

System and software requirements are:

• A computer or other network device supporting Wi-Fi or wired Ethernet
• A web browser, such as Chrome™, Firefox®, Internet Explorer 8® or higher, or Safari® 5.1 or higher

1.2/ FEATURES

Your Verizon Router features include:

• Support for multiple networking standards, including
  – WAN – 10 Gigabit Ethernet
  – LAN – 802.11 a/b/g/n/ac/ax, 10/2.5 Gigabit Ethernet and MoCA 2.5 interfaces
• Integrated wired networking with 3-port Ethernet switch and Coax (MoCA)
  – Ethernet supports speeds up to 10 Gbps
MoCA 2.5 LAN enabled to support speeds up to 2500 Mbps over coaxial cable

• One Type-C USB 3.0 port

• Integrated Wi-Fi networking with 802.11a/b/g/n/ac/ax access point featuring:
  – backward compatible to 802.11a/b/g/n/ac
  – 2.4 GHz 11ax 4x4
  – 5 GHz 11ax 4x4
  – 6 GHz 11ax 4x4

• Enterprise-level security, including:
  – Fully customizable firewall with Stateful Packet Inspection (SPI)
  – Content filtering with URL-keyword based filtering, parental controls, and customizable filtering policies per computer
  – Intrusion detection with Denial of Service protection against IP spoofing attacks, scanning attacks, IP fragment overlap exploit, ping of death, and fragmentation attacks
  – Virtual server functionality; providing protected access to internet services such as web, FTP, email, and telnet
  – DMZ (demilitarized zone) host support of a network security neutral zone between a private network and the internet
  – Event logging
  – Home Network Protection
  – SIP ALG
FEATURES

- Static NAT
- Port forwarding
- Port triggering
- Access control
- Advanced Wi-Fi protection featuring WPA2 & WPA3 Modes and MAC address filtering
- Wi-Fi Multimedia (WMM) for Wi-Fi QoS (quality-of-service)
- Dual-stack network configuration of IPv4 and IPv6
- DHCP server
- WAN interface auto-detection
- Dynamic DNS
- DNS server
- LAN IP and WAN IP address selection
- MAC address cloning
- QoS support (end to end layer 2/3) featuring: Differentiated Services (Diffserv), 802.1p/q prioritization, and pass-through of WAN-side DSCPs, Per Hop Behaviors (PHBs), and queuing to LAN-side devices
- Secure remote management using HTTPS or Verizon app
- Static routing
- VPN (VPN pass through only)
- IGMP
- Daylight savings time support
1.3/ GETTING TO KNOW YOUR VERIZON ROUTER

1.3a/ FRONT PANEL

The Router Status LED will be solid white when your Verizon Router is turned on, connected to the internet, and functioning normally.

**Router Status LED**

<table>

GETTING TO KNOW YOUR VERIZON ROUTER

1.3b/ REAR PANEL

The rear panel of your router has a label that contains important information about your device, including the default settings for the Verizon Router’s Wi-Fi name (SSID), Wi-Fi password (WPA2 key), local URL for accessing the router’s network settings, and network settings password. The label also contains a QR code that you can scan with your smartphone, tablet, or other camera-equipped Wi-Fi device to allow you to automatically connect your device to your Wi-Fi network without typing in a password (requires a QR code reading app with support for Wi-Fi QR codes).

The rear panel has six ports; F-type coax, Ethernet LAN (three), Ethernet WAN, and USB. The rear panel also includes a DC power jack and a reset button.
• **WPS Button** - allows quick access to the Wi-Fi Protected Setup (WPS) feature and pairing mode.

The WPS button is used to initiate Wi-Fi Protected Setup. This is an easy way to add WPS capable devices to your Wi-Fi network. To activate the WPS function, press and hold the WPS button located on the rear of your Verizon Router for more than two seconds. When WPS is initiated from your router, the Router Status LED slowly flashes blue for up to two minutes, allowing time to complete the WPS pairing process on your Wi-Fi device (also known as a Wi-Fi client). When a device begins connecting to your router using WPS, the Router Status LED rapidly flashes blue for a few seconds, and then solid white as the connection completes.

If there is an error during the WPS pairing process, the Router Status LED rapidly flashes red for two minutes after the error occurs.

Refer to the “Connecting A Wi-Fi Device Using WPS” on page 35 for more details. In addition, the Router Status LED also provides a quick view of the operational state of the Verizon Router using various colors as indicated in the chart above.

• **Ethernet LAN** - connects devices to your Verizon Router using Ethernet cables to join the local area network (LAN). The three Ethernet LAN ports:
  – one 10GE LAN port is 100 Mbps, 1/2.5/5/10 Gbps auto-sensing
  – the other two 2.5GE LAN ports are 10/100 Mbps, 1/2.5 Gbps auto-sensing
GETTING TO KNOW YOUR VERIZON ROUTER

• **Type-C USB** - provides up to 1000 mA at 5 VDC for attached devices. For example, you could charge a cell phone.

• **10Gbps Ethernet WAN** - connects your Verizon Router to the internet using an Ethernet cable.

• **Coax LAN** - connects your router to other MoCA devices using a coaxial cable.

*Warning:* The coax port is intended for connection to Verizon devices only. It must not be connected to any exterior or interior coaxial wires not designated for Verizon devices.

• **Reset Button** - allows you to reset your router to the factory default settings. To perform a soft reboot, press and hold the button for at least three seconds. To reset your router to the factory default settings, press and hold the button for at least ten seconds.

• **Power** - connects your Verizon Router to an electrical wall outlet using the supplied power adapter.

*Warning:* The included power adapter is for home use only, supporting voltages from 105-125 voltage in AC. Do not use in environments with greater than 125 voltage in AC.
1.3c/ REAR LIGHTED INDICATORS

LAN/WAN Ethernet
- Unlit – Indicates no Ethernet link or dims after 5 minutes idle

Left LED
- Solid yellow – Indicates 1 Gbps link
- Flash yellow – Indicates LAN/WAN activity. The traffic can be in either direction.

Right LED
- Solid white – Indicates 2.5/10 Gbps link
- Flash white – Indicates LAN/WAN activity. The traffic can be in either direction.

1.3d/ MOUNTING THE VERIZON ROUTER TO A WALL

For optimum performance, the Verizon Router is designed to stand in a vertical upright position. Verizon does not recommend wall mounting the Verizon Router. However, if you wish to mount your Verizon Router, you can purchase a wall mount bracket from the Verizon Accessories Store at verizon.com/home/accessories/networking-wifi

To mount your Verizon Router to a wall:

1. Select a mounting spot near a power outlet and the Ethernet port of the device that provides internet on your premises.
**GETTING TO KNOW YOUR VERIZON ROUTER**

2. Mark screw hole positions on the wall. Drill holes for the wall anchors using a 1/4 inch (6.35 mm) drill bit.

3. Insert the anchors in the drilled holes and hammer until they are flush with the wall.
4. Place the screws into the small holes of the bracket and tighten the screws into your wall for securing the wall mount bracket.
5. Align the mounting hole located on the bottom of the router to the screw of the wall mount bracket.
6. Rotate and align the router to the preferred position. While using the hole in the mounting bracket, connect the Ethernet cable providing internet to the router’s WAN port and other cables as needed. Tighten the bracket screw to lock the device in place.
7. To fasten the attached cables of the router, manage the cables, then tighten the Velcro® strap with buckle.
02 / CONNECTING YOUR VERIZON ROUTER

2.0 Setting up Your Verizon Router
2.1 Expanding Wi-Fi Coverage
2.2 Computer Network Configuration
2.3 Main Screen
Connecting your Verizon Router and accessing its web-based User Interface (UI) are both simple procedures.

Accessing the UI may vary slightly, depending on your device’s operating system and web browser.
SETTING UP YOUR VERIZON ROUTER

2.0/ SETTING UP YOUR VERIZON ROUTER
Before you begin, if you are replacing an existing router, disconnect it. Remove all old router components, including the power supply. They will not work with your new Verizon Router.

2.0a/ INSTALLATION INSTRUCTIONS

1. CONNECT YOUR CABLES
   A. Connect the coax cable from the coax port on your router to a coax outlet. (Required for Fios TV; skip for 5G Home installation)
      • Separate subscription required for Fios TV; not available in all areas.
   B. Connect the Ethernet cable from your router’s WAN port to an Ethernet outlet. (Required for internet speeds greater than 100 Mbps)
   C. Connect the power cord to your router then to an electrical outlet.
D. Router will take up to 10 minutes to update completely. Move on when the front light is solid white.

2. CONNECT YOUR DEVICES

Wired or Wi-Fi? Your choice.

Wired

A. Connect the Ethernet cable to any LAN port on your router.
B. Connect the other end to your computer.

Wi-Fi

A. Get the Wi-Fi name and password off the label on your router.
B. On your device, choose your Wi-Fi name when it appears.
C. Enter the Wi-Fi password exactly as it is on your router label.
Wi-Fi Network
The Verizon Router has one Wi-Fi name supporting 2.4 and 5 GHz signals. 6 GHz can be enabled and included as well with heightened security, WPA3. The Self-Organizing Network (SON) feature lets your devices move between these signals automatically for an optimized Wi-Fi connection.

3. COMPLETE ACTIVATION
Activate your service by opening a web browser on your computer and following the prompts. (Skip for 5G Home installation)

2.0b/ CONFIGURE YOUR VERIZON ROUTER
1. Open a web browser on the device connected to your Verizon Router network.

2. In the browser address field (URL), enter: mynetworksettings.com, then press the Enter key on your keyboard.

Alternately, you can enter: https://192.168.1.1
3. You may see a security message warning that **Your connection is not private** when you visit mynetworksettings.com (https://192.168.1.1) for GUI management. To get to the login screen, click the **ADVANCED** button, then on **Proceed to 192.168.1.1 (unsafe)** link.

4. The login screen will appear.
   The first time you access your Verizon Router, an Easy Setup Wizard displays to help step you through the setup process.

5. On the **Step 1: Please log in to your router** screen, enter the password that is printed next to the Network Settings Password on the label on the rear of your router. Click **Continue**.
6. The **Change Wi-Fi name** screen displays. You can continue with the default settings or customize them as needed. For your protection, your Verizon Router is pre-set at the factory to use WPA2 (Wi-Fi Protected Access II) encryption for your Wi-Fi network. This is the best setting for most users and allows the most devices to securely connect.

7. You can optionally set up the **Guest Wi-Fi** network by toggling the selection to **On**. You can continue with the default settings or customize them as needed.
8. You can optionally enable the 6 GHz Wi-Fi band by toggling the selection to On. Review the notification that enabling 6 GHz will modify the existing 2.4 & 5 GHz security from WPA2 to WPA2/WPA3 and 6 GHz will be enabled using WPA3. You can continue to use one Wi-Fi Name and Password across all Wi-Fi bands.

The IoT Wi-Fi will also be enabled for any devices that do not support WPA3, and this will use a unique Wi-Fi name and password based on the default SSID & Password. Devices on this Wi-Fi will be able to communicate with other devices on the Primary network with no firewall restrictions separating them.

9. Click Continue to review your settings.

10. The Apply Wi-Fi changes screen is displayed. Review your current settings. You may optionally save your settings as an image on your device by selecting the button, Save as Image. Click Apply to save the Wi-Fi changes to your Verizon Router.
For your protection, your Verizon Router is pre-set at the factory to use WPA2 (Wi-Fi Protected Access II) encryption for your Wi-Fi network. This is the best setting for most users and provides security.

11. Click Continue. The Apply Wi-Fi changes screen appears. You have an option of saving the Wi-Fi settings as an image on your device by clicking the Save as image button. After you click Save as image to save your Wi-Fi settings as an image, click Apply to save the Wi-Fi changes to your Verizon Router.

*Note: If you select Save as image, the image file is saved to your web browser’s download folder.*
**Important:** If you are on a Wi-Fi device when setting up your Verizon Router and changes are made to the Wi-Fi name or password, then you will be disconnected from the Wi-Fi network. When this occurs, review the Wi-Fi networks available and choose the network name when it appears. Enter the Wi-Fi password you have applied, and your device will reconnect to the Verizon Router.
EXPANDING WI-FI COVERAGE

The **You’re all set up!** screen displays once your Verizon Router verifies the final settings and has successfully connected to the internet and is ready for use. You can click on **Go to Network Settings** to access the main screen of the Verizon Router.

If your Verizon Router is subsequently reset to the factory default settings, the settings printed on the label will again be in effect.

If your Verizon Router fails to connect, follow the troubleshooting steps in the Troubleshooting section of this guide.

### 2.1/ EXPANDING WI-FI COVERAGE

Connecting one or more of Verizon’s Wi-Fi Extender Minis or Fios Extenders to the Verizon Router allows you to extend the Verizon Router’s Wi-Fi signal range and to eliminate Wi-Fi dead zones on your Wi-Fi network.
2.1a/ Wi-Fi Installation with Wi-Fi Extender Mini

1. Plug the Wi-Fi Extender Mini into a power outlet next to the Verizon Router.

2. When the light on front is solid yellow, press the pair button on the Verizon Router and the Extender Mini. Both devices will blink blue while pairing.

3. Wait until you see a blinking yellow light then unplug the Wi-Fi Extender Mini.
EXPANDING WI-FI COVERAGE

4. Move it to an area between the router and the weak Wi-Fi coverage, then plug it in.

   **Note:** When plugging in the Wi-Fi Extender Mini, ensure there is proper ventilation to all sides and in front of the extender. Do not plug in the unit behind furniture, curtains, or anything that obstructs its air flow.

5. Once the light turns solid white, your setup is complete.

You’re all set! Your Wi-Fi Extender Mini will automatically connect to your Wi-Fi network, there is nothing more to do.

   **Note:** If there is an error during the WPS pairing process, the Status LED slowly flashes red for two minutes after the error occurs.

2.1b/ Wired Installation with Fios Extender

1. Connect the Verizon Router to a coax outlet. (If the coax outlet is already in use, use a coax splitter.)

2. Connect the extender to a coax outlet – ideally in an area with spotty Wi-Fi coverage.

3. Connect the power cords to your router and extender then to an electrical outlet.

4. After 10 minutes, the light on the extender should turn solid white, indicating the connection is complete.
Note: If using Ethernet wiring, follow the same steps as above with an Ethernet cable instead of a coax cable.

You’re all set! Your devices will connect automatically with the same Wi-Fi network name and password as your Verizon Router.

2.2/ COMPUTER NETWORK CONFIGURATION

Each network interface on your computer should either automatically obtain an IP address from the upstream Network DHCP server (default configuration) or be manually configured with a statically defined IP address and DNS address. We recommend leaving this setting as it is.

2.2a/ CONFIGURING DYNAMIC IP ADDRESSING

To configure a computer to use dynamic IP addressing:

WINDOWS 7/8

1. In the Control Panel, locate Network and Internet, then select View Network Status and Tasks.

2. In the View your active networks – Connect or disconnect section, click Local Area Connection in the Connections field. The Local Area Connection Status window displays.

3. Click Properties. The Local Area Connection Properties window displays.

5. Click the Obtain an IP address automatically radio button.

6. Click the Obtain DNS server address automatically radio button, then click OK.

7. In the Local Area Connection Properties window, click OK to save the settings.

8. To configure Internet Protocol Version 6 (TCP/IPv6) to use dynamic IP addressing, repeat steps 1 to 7. However for step 4, select Internet Protocol Version 6 (TCP/IPv6) in the Properties option (refer to IPv6 section for Verizon Router configuration).

**WINdOWS 10**

1. On the Windows desktop, click on the Start icon. Select Settings and click Network & Internet.

2. In the Network & Internet, click Ethernet.

3. Select Network and Sharing Center. The View your basic network information and set up connections window displays.

4. In the View your active networks, click Ethernet in the Connections field. The Ethernet Status window displays.

5. Click Properties. The Ethernet Properties window displays.

7. Click the Obtain an IP address automatically radio button.

8. Click the Obtain DNS server address automatically radio button, then click OK.

9. In the Local Area Connection Properties window, click OK to save the settings.

10. To configure Internet Protocol Version 6 (TCP/IPv6) to use dynamic IP addressing, repeat steps 1 to 9. However for step 6, select Internet Protocol Version 6 (TCP/IPv6) in the Properties option (refer to IPv6 section for Verizon Router configuration).

MACINTOSH OS X

1. Click the Apple icon in the top left corner of the desktop. A menu displays.

2. Select System Preferences. The System Preferences window displays.

3. Click Network.

4. Verify that Ethernet, located in the list on the left, is highlighted and displays Connected.

5. Click Assist Me.

6. Follow the instructions in the Network Diagnostics Assistant.
2.2b/ CONNECTING OTHER COMPUTERS AND NETWORK DEVICES

You can connect your Verizon Router to other computers or set top boxes using an Ethernet cable, Wi-Fi connection (Wi-Fi), or coaxial cable.

ETHERNET

1. Plug one end of an Ethernet cable into one of the open Ethernet ports on the back of your Verizon Router.
2. Plug the other end of the Ethernet cable into an Ethernet port on the computer.
3. Repeat these steps for each computer to be connected to your Verizon Router using Ethernet. You can connect up to three.

CONNECTING A WI-FI DEVICE USING WPS

Wi-Fi Protected Setup (WPS) is an easier way for many devices to set up a secure Wi-Fi network connection. Instead of manually entering passwords or multiple keys on each Wi-Fi client, such as a laptop, printer, or external hard drive, your Verizon Router creates a secure Wi-Fi network connection.

In most cases, this only requires the pressing of two buttons – one on your Verizon Router and one on the Wi-Fi client. This could be either a built-in button or one on a compatible Wi-Fi adapter/card, or a virtual button in software. Once completed, this allows Wi-Fi clients to join your Wi-Fi network.
To initialize the WPS process, you can either press and hold the WPS button located on the rear of your Verizon Router for more than two seconds or use the UI and press the on-screen button.

You can easily add Wi-Fi devices to your Wi-Fi network using the WPS option if your Wi-Fi device supports the WPS feature.

To access WPS using the user interface:

1. From the Basic menu, select Wi-Fi settings, then click Wi-Fi Protected Setup.

2. Enable the protected setup by moving the selector to on.

3. Use one of the following methods:
   - If your Wi-Fi client device has a WPS button, press the WPS button on your router for more than two seconds, then click the start WPS button in the Option 1 to start the WPS registration process.
If your client device has a WPS PIN, locate the PIN printed on the client’s label or in the client documentation. Enter the PIN number in the **Enter PIN** field. The **Client WPS PIN** field is located in the **Option 2** on the user interface.

- Click **Register**.
- Alternatively, you can enter the router’s PIN shown on this screen into the WPS user interface of your device, if this PIN mode is supported by your Wi-Fi device.

4. After pressing the WPS button on your router, you have two minutes to press the WPS button on the client device before the WPS session times out.

When the WPS button on your router is pressed, the Router Status LED on the front of your router begins flashing blue. The flashing continues until WPS pairing to the client device completes successfully. At this time, the Router Status LED turns solid white.

If WPS fails to establish a connection to a Wi-Fi client device within two minutes, the Router Status LED on your router flashes red for two minutes to indicate the WPS pairing process was unsuccessful. After flashing red, the light returns to solid white to indicate that Wi-Fi is on.

**Note:** *Wi-Fi Protected Setup (WPS) cannot be used if WPA3 security is enabled or SSID broadcast is disabled or if MAC address authentication is enabled with an empty white list.*
CONNECTING A WI-FI DEVICE USING A PASSWORD

1. Verify each device that you are connecting with Wi-Fi has built-in Wi-Fi or an external Wi-Fi adapter.
2. Open the device’s Wi-Fi settings application.
3. Select your Verizon Router’s Wi-Fi network name (SSID) from the device’s list of discovered Wi-Fi networks.
4. When prompted, enter your Verizon Router’s Wi-Fi password (WPA2 or WPA3 key) into the device’s Wi-Fi settings. Your router’s default Wi-Fi network name and password are located on the sticker on the rear panel of your Verizon Router.
5. Verify the changes were implemented by using the device’s web browser to access a site on the internet.
6. Repeat these steps for every device that you are connecting with Wi-Fi to your router.

COAX

1. Verify all coax devices are turned off.
2. Disconnect any adapter currently connected to the coaxial wall jack in the room where your router is located.
3. Connect one end of the coaxial cable to the coaxial wall jack and the other end to the coax port on your network device.
4. Power up the network device.

©2021 Verizon. All Rights Reserved
When you log into your router, the dashboard main page displays the navigation menus of Basic and Advanced settings, Wi-Fi settings, Devices, Parental Controls, and connection status, and Basic quick links.

The configuration options available via the left-hand main menu are described in the following chapters:

- **Basic Settings**
  - Status - this chapter
  - Wi-Fi - Chapter 3
  - Devices - Chapter 4
  - Parental Controls - Chapter 5
- **Advanced Settings** - Chapter 6
2.3c/ STATUS

General

To view the status:

Access the dashboard Home page. You can quickly view your router’s status by clicking **Status** on the screen. This section displays the status of your router’s local network (LAN) and internet connection (WAN), firmware and hardware version numbers, MAC Address, IP settings of Verizon Router and Extender Mini(s) (if connected).
# MAIN SCREEN

## Status

### General

- **Status Name:** CR15000A
- **Current IP:** 192.168.0.1
- **Device Model:** 192.168.0.1
- **Connected:** Connected
- **Broadcast Address:** 192.168.0.1
- **MAC Address:** 00:11:22:33:44:55

### Extender

- **Model Name:** CE1078204G
- **Current IP:** 192.168.0.1
- **Device Model:** 192.168.0.1
- **Connected:** Connected
- **Broadcast Address:** 192.168.0.1

### Details

- **IP Address:** 192.168.0.1
- **Default Gateway:** 192.168.0.1
- **Subnet Mask:** 255.255.255.0
To view: From the Basic menu, select Status from the left pane and then click Open Source Software.
WI-FI SETTINGS

3.0 Overview
3.1 Basic Settings
3.2 Advanced Settings
Wi-Fi networking enables you to free yourself from wires, making your devices more accessible and easier to use.

You can create a Wi-Fi network, including accessing and configuring Wi-Fi security options.
Your Verizon Router provides you with Wi-Fi connectivity using the 802.11a, b, g, n, ac or ax standards. These are the most common Wi-Fi standards.

The Verizon Router contains 2.4 GHz, 5 GHz and 6 GHz Wi-Fi bands, and the operation modes and speeds are listed as follows:

• **2.4 GHz**
  – Legacy operation mode: supports IEEE 802.11b/g/n with maximum theoretical rate at 600 Mbps
  – Compatibility mode: supports IEEE 802.11ax
    • backward compatible with IEEE 802.11b/g/n/ac
    • maximum theoretical rate up to 1.1 Gbps

• **5 GHz**
  – Legacy operation mode: supports IEEE 802.11a/n/ac with maximum theoretical rate at 2.2 Gbps
  – Compatibility mode: supports IEEE 802.11ax
    • backward compatible with IEEE 802.11a/n/ac
    • maximum theoretical rate up to 2.4 Gbps

• **6 GHz**
  – Operation mode: supports IEEE 802.11ax
  – Maximum rate up to 4.8 Gbps
The Wi-Fi service and Wi-Fi security are activated by default. The level of security is preset to WPA2 encryption using a unique default WPA2 key (also referred to as a passphrase or password) pre-configured at the factory. This information is displayed on a sticker located on the rear of your router.

Your router integrates multiple layers of security. These include Wi-Fi Protected Access, and firewall.

3.1/ BASIC SETTINGS
3.1a/ PRIMARY NETWORK
You can configure the basic security settings for 2.4 GHz, 5 GHz or 6 GHz of your Wi-Fi network.
BASIC SETTINGS

To configure the Primary Wi-Fi name & password and security settings:

1. From the Basic menu, select Wi-Fi from the left pane and then click Primary Network.

2. By default the Primary Wi-Fi is enabled. To de-activate, move the selector to off. If the network is not enabled, no Wi-Fi devices will be able to connect to the primary network.

3. If desired, enter a new name and password for the Wi-Fi network or leave the default name and password that displays automatically.

4. To configure the Wi-Fi Security, click the setup button and select WPA2 or WPA3.

   You can optionally enable the 6 Ghz Wi-Fi band by toggling the selection to On. Enabling 6 GHz will modify the existing 2.4 & 5 GHz security from WPA2 to WPA2/WPA3 and 6 GHz will be enabled using WPA3.
Caution: These settings should only be configured by experienced network technicians. Changing the settings could adversely affect the operation of your router and your local network.

• Broadcast Wi-Fi network name (SSID)

You can configure the Verizon Router’s SSID broadcast capabilities to allow or disallow Wi-Fi devices from automatically using a broadcast SSID name to detect your router Wi-Fi network.

– To enable SSID broadcasting, move the selector to on. SSID broadcast is enabled by default. The SSID of the Wi-Fi network will be broadcast to all Wi-Fi devices.
– To disable SSID broadcasting, move the selector to off. The public SSID broadcast will be hidden from all Wi-Fi devices. You will need to manually configure additional Wi-Fi devices to join the Wi-Fi network.

• Device Access List

You can configure your router to limit access to your Wi-Fi network to only those devices with specific MAC addresses.
To set Wi-Fi MAC authentication:

1. To setup access control, click on the **Edit List**.
2. Enter the MAC address of a device and click **Add new device**.
3. Select either:
   - **Allow access to all devices** – allows the listed devices to access the Wi-Fi network.
   - **Deny access to all devices** – denies access to the listed devices. All other Wi-Fi devices will be able to access the Wi-Fi network if they use the correct Wi-Fi password.

**Warning:** *This will block Wi-Fi network access for all devices not in the list. Only devices in the list will be able to connect to the Wi-Fi network.*

4. Repeat step 2 and step 3 to add additional devices, as needed.
5. When all changes are complete, click **Apply changes** to save the changes.
To activate the Wi-Fi 2.4 GHz, 5 GHz or 6 GHz frequency for your Wi-Fi network, move the selector to **on**, click the setup button and configure access security of your Wi-Fi network.

- **Group key** - to update the WPA shared key, move the selector to **on**.
- **Wi-Fi QoS (WMM)** - improves the quality of service (QoS) for voice, video, and audio streaming over Wi-Fi by prioritizing these data streams.
- **WMM Power Save** - improves battery life on mobile Wi-Fi devices such as smart phones and tablets by fine-tuning power consumption.
3.1b/ GUEST NETWORK

The Guest Network is designed to provide internet connectivity to your guests but restricts access to your primary network and shared files. The primary network and the guest network are separated from each other through firewalls. You create one Guest Wi-Fi SSID and one password, and use it for all guests. The guest network SSID does not change when you make a change to your primary network SSID.

The Verizon Router is shipped from the factory with Guest Wi-Fi turned off. The default SSID for Guest Wi-Fi is preconfigured at the factory to the default Wi-Fi network name (SSID) which is displayed on a sticker located at the rear of the router followed by hyphen guest (-Guest). For example – if the router is shipped with a default SSID of “Verizon-ABCDE” then the default SSID for Guest Wi-Fi is “Verizon-ABCDE-Guest”.

To configure the security settings for your guest network:

1. From the Basic menu, select Wi-Fi and then click Guest Network.
2. Move the selector to **on**.

3. If desired, enter a new name and password for the Wi-Fi network or leave the default name and password that displays automatically.

4. Press **Apply changes** to save the changes.

   *Important: It is not recommended to create a guest network without a password.*

### 3.1c/ IOT NETWORK

The router supports connection of multiple IoT devices on a separate WiFi SSID. The IoT Network is designed to provide an easier setup experience for your Internet of Things (IoT) devices which benefit from connecting to the 2.4 GHz band while keeping your Primary Network settings unchanged. IoT devices and Primary devices can communicate with no firewall restrictions separating them.

The Verizon Router is shipped from the factory with IoT Wi-Fi turned off. The default SSID for IoT Wi-Fi is preconfigured at the factory to the default Wi-Fi network name (SSID) which is displayed on a sticker located at the rear of the router followed by hyphen IoT (-IoT). For example – if the router is shipped with a default SSID of “Verizon-ABCDE” then the default SSID for IoT Wi-Fi is “Verizon-ABCDE-IoT”.

©2021 Verizon. All Rights Reserved
To enable IoT Wi-Fi link:

1. From the Basic menu, select Wi-Fi and then click IoT Network.
2. Move the selector to on.
3. If desired, enter a new name and password for the Wi-Fi network or leave the default name and password that displays automatically.
4. Press Apply changes to save the changes.

3.1d/ WI-FI PROTECTED SETUP (WPS)

Wi-Fi Protected Setup (WPS) is an easier way for many devices to set up a secure Wi-Fi network connection. Instead of manually entering passwords or multiple keys on each Wi-Fi client, such as a laptop, printer, or external hard drive, your Verizon Router creates a secure Wi-Fi network connection.

In most cases, this only requires the pressing of two buttons – one on your Verizon Router and one on the Wi-Fi client. This could be
either a built-in button or one on a compatible Wi-Fi adapter/card, or a virtual button in software. Once completed, this allows Wi-Fi clients to join your Wi-Fi network.

To initialize the WPS process, you can either press and hold the WPS button located on the front of your Verizon Router for more than two seconds or use the UI and press the on-screen button.

You can easily add Wi-Fi devices to your Wi-Fi network using the WPS option if your Wi-Fi device supports the WPS feature.

**To access WPS using the user interface:**

1. From the **Basic** menu, select **Wi-Fi** and then click **Wi-Fi Protected Setup (WPS)**.
2. Enable the protected setup by moving the selector to **on**.

3. Use one of the following methods:
   - If your Wi-Fi client device has a WPS button, press the WPS button on your router for more than two seconds, then click the **start WPS** button in the **Option 1** to start the WPS registration process.
   - If your client device has a WPS PIN, locate the PIN printed on the client’s label or in the client documentation. Enter the PIN number in the **Enter PIN** field. The **Client WPS PIN** field is located within **Option 2** on the user interface.
   - Click **Register**.
   - Alternatively, you can enter the router’s PIN shown on this screen into the WPS user interface of your device, if this PIN mode is supported by your Wi-Fi device.

4. After pressing the WPS button on your router, you have two minutes to press the WPS button on the client device before the WPS session times out.

When the WPS button on your router is pressed, the Router Status LED on the front of your router begins flashing blue. The flashing continues until WPS pairing to the client device completes successfully. At this time, the Router Status LED turns solid blue.

If WPS fails to establish a connection to a Wi-Fi client device within two minutes, the Router Status LED on your...
router flashes red for two minutes to indicate the WPS pairing process was unsuccessful. After flashing red, the light returns to solid white to indicate that Wi-Fi is on.

*Note: Wi-Fi Protected Setup (WPS) cannot be used if WPA3 security is enabled or SSID broadcast is disabled or if MAC address authentication is enabled with an empty white list.*

### 3.2/ ADVANCED SETTINGS
### 3.2a/ PRIMARY NETWORK

**Self-Organizing Network (SON)**

The Verizon Router supports 2.4 GHz, 5 GHz and 6 GHz signals. The Self-Organizing Network (SON) feature lets your devices move between these signals automatically for an optimized Wi-Fi connection.
ADVANCED SETTINGS

To configure SON, Primary Wi-Fi name & password and security settings:

1. From the Advanced menu, select Wi-Fi from the left pane and then click Primary Network.
2. To enable SON, move the selector to on.
3. By default the Primary Wi-Fi is enabled. To de-activate, move the selector to off. If the network is not enabled, no Wi-Fi devices will be able to connect to the primary network.
4. If desired, enter a new name and password for the Wi-Fi network or leave the default name and password that displays automatically.
5. To configure the Wi-Fi security, click the setup button and select WPA2 or WPA3.
Caution: These settings should only be configured by experienced network technicians. Changing the settings could adversely affect the operation of your router and your local network.

3.2b/ RADIO MANAGEMENT
You can configure the channel settings for the 2.4 GHz, 5 GHz and 6 GHz band(s) of your Wi-Fi network.
ADVANCED SETTINGS

To view and configure the channel settings:

1. From the **Advanced** menu, select **Wi-Fi** and then click **Radio Management**.
2. Click on **Settings** on the top right-hand side of the **Radio Management** page to configure the channel scan settings:

   - Select the **Keep my channel selection during power cycle** check box to save your channel selection when your Verizon Router is rebooted.

   - **Enable DFS channels during channel scan**: DFS channels are enabled by default during channel scans.

   *Note: DFS channels are a subset of the 5 GHz network that is shared with radar systems. Some consumer devices do not support these channels and cannot connect to routers using them. Examples include some media streaming devices. Disabling this feature will allow the router to select the best available channel to broadcast on and allow these devices to connect.*

   - Press **Apply changes** to save the changes.
3. Click **Perform Scan** to perform channel availability scan for the Verizon Router accommodating the best radio channel and providing the best Wi-Fi performance.

4. On the **Radio Management** page for 2.4 GHz, 5 GHz or 6 GHz, the following information displays and can be configured:

   - **Channel Score** - displays a network congestion score of one to ten in each Wi-Fi channel. It can be used to determine which channels to use or to avoid. Higher score indicates less congestion in a channel.

   - **Channel Analysis** - scans and displays channel bandwidth and signal strength of available APs.

   - **Channel** - this is the radio channel used by the Wi-Fi router and its clients to communicate with each other. The channel must be the same on the router and all of its Wi-Fi clients. Select the channel you want the Wi-Fi radio to use to communicate, or accept the default (**Auto**) channel selection. Then the router will automatically assign itself a radio channel.

   - **Width** - displays the Wi-Fi channel currently in use on each band. Users can select from available channels.
ADVANCED SETTINGS

To view the channel settings history:

1. From the Advanced menu, select Wi-Fi and then click Channel Settings.
2. Click on History to display the channel settings history.
CONNECTED DEVICES

4.0 Overview
4.1 Device Settings
You can view the settings of the network devices connected to your Verizon Router’s network.
4.0/ OVERVIEW

The Devices section allows you to view and manage all the devices connected to your Primary, Guest, and IoT networks. You can view device details, block internet service, and rename devices.

4.1/ DEVICE SETTINGS

To view and manage the connected devices on your network:

1. From the Basic menu, select Devices from the left pane.
2. The screen displays information about connected devices including Device Name and identifiers, Parental Controls, the type of network connection, and settings that you can view and configure.
3. The Verizon Router provides a sort function for listing connected devices in a meaningful order. For example, select Sort A to Z from the dropdown list to view the connected device in alphabetical order.
4. Select Show All from the dropdown list to display all devices on your network.
5. Select **Expanded List** from the dropdown list to view additional device information for all connected devices.

- **Block/Allow** - Click this option to quickly enable/disable a device from having internet access.
  
  For additional information about blocking websites, refer to Chapter 5 Setting Parental Controls.

6. Click the Settings icon to access the Device Details page for that device:
DEVICE SETTINGS

Device Settings

Device Information
- Name: CME1000-149642087X
- Location: Other
- Mode: PBR

Device Add-Ons
- Port Forwarding Rule

Device Connection
- Connection Info:
  - Connection: Wi-Fi / 4G LTE
  - Frequency: 6
  - Profile Supported: A+X
  - Radio Configuration: 4 x 4:4
  - Min Rate / Modulation Rate: 433Mbps
  - SSID: 3P
  - SSID: 44

Network Info:
- Mac Address: 14:96:42:47:33
- **Device Information:**
  - **Name, Location, Mobility, and Type** - Displays the current known information of the device. These can be updated or corrected as needed. Click **Edit** and **Save** to apply any changes.
  - This section also provides the device MAC Address, Access Point information the device is connected to as well as the IPv4 Address of the device.

- **Device Add-Ons**
  - **Port Forwarding** - Port Forwarding allows your network to be exposed to the internet in specific limited and controlled ways. For example, you could allow specific applications, such as gaming, voice, and chat, to access servers in the local network. To access the Port Forwarding page, click **Go to Port Forwarding**.
  - For additional information, refer to the Port Forwarding section in Chapter 6 Configuring Advanced Settings.
  - If any Port Forwarding Rules are applied to this device, then the first row of that rule will be displayed here.

- **Device Connection**
  - This section displays Connection information of how and how well the device is connected to the Access Point. It also displays the Network related information, including IPv6 addresses and a **Ping Test** option.
05 / SETTING PARENTAL CONTROLS

5.0 Activating Parental Controls
5.1 Active Rules
The abundance of harmful information on the internet poses a serious challenge for employers and parents alike as they ask “How can I regulate what my employee or child does on the internet?”

With that question in mind, your Verizon Router’s Parental Controls were designed to allow control of internet access on all locally networked devices.
ACTIVATING PARENTAL CONTROLS

5.0/ ACTIVATING PARENTAL CONTROLS

You can create a basic access policy or using the provided Rule Templates for any computer or device on your Verizon Router network. Parental controls limit internet access to specific websites based on a schedule that you create.

Access can be limited on specific websites or keywords embedded in a website. For example, you can block access to the ‘www.anysite.com’ as well as block any website that has the word ‘any’ in its site name.

To limit device access:

1. From the Basic menu, select Parental Controls from the left pane.
2. To use the default Rule Templates, select one of the pre-defined rules as shown on screen to quickly setup access policy for devices on your network.
3. To create a new access policy, click on the **New Rule** and the configuration page displays.
ACTIVATING PARENTAL CONTROLS

4. Create a rule name.
5. Create a schedule by selecting the days of the week when the rule will be active or inactive.
6. Set the time when the rule will be active or inactive, then specify the start time and end time.
7. Select the Condition rule of All Internet OFF/All Internet ON to block/allow the access to all internet websites.
8. Click Assign devices to this rule to select the computers or device where you are limiting access. Click Apply to save changes.

9. To remove a device from the list, click Remove to the assigned device.
10. Click Make exceptions to this rule for the following Exceptions options:
    • Enter the name of the website or keywords within a URL to block/allow the specified websites and websites with names containing the specified keyword.
11. To remove a website or keyword, click **Remove** to the word.

12. Click **Apply changes** to save changes.

**NEW!** The Verizon app provides robust security to protect your home and business networks. Click the **Get app now** link to download the Verizon app for using the Verizon app on the iOS or Android OS.

### 5.1/ ACTIVE RULES

You can view the rules created for your Verizon Router shown on the Parental Controls page.
06 /

CONFIGURING ADVANCED SETTINGS

6.0 Firewall
6.1 Utilities
6.2 Network Settings
6.3 Date & Time
6.4 DNS Settings
6.5 Monitoring
6.6 System Settings
Advanced settings cover a wide range of sophisticated configurations for your Verizon Router’s firmware, security setup and network.

Verizon Router’s security suite includes comprehensive and robust security services, such as stateful packet inspection, firewall security, user authentication protocols, and password protection mechanisms.

These and other features help protect your computers from security threats on the internet.
This chapter covers the following advanced features:

**Firewall** - select the security level for the firewall.
- Access Control - restrict access from the local network to the internet.
- Port Forwarding - enable access from the internet to specified services provided by computers on the local network.
- Port Triggering - define port triggering entries to dynamically open the firewall for some protocols or ports.
- DMZ Host - allows a single device on your primary network to be fully exposed to the internet for special purposes such as internet gaming.
- SIP ALG - support the Application Layer Gateway for Session Initiation Protocol
- Static NAT - allow multiple static NAT IP addresses to be designated to devices on the network.
- IPv6 Pinhole - provide access tunnel to a service on a host for a particular application.

**Utilities**
- Diagnostics – performs diagnostic tests.
- Save and Restore – resets your Verizon Router to its default settings.
- Reboot Router – restarts your Verizon Router.
- MAC Cloning – clones the MAC address.
• ARP Table – displays active devices with their IP and MAC addresses.
• NDP (Neighbor Discovery Protocol) Table – displays active devices with their IPv6 and MAC addresses of DHCP connection.
• Users – creates and manages remote users.
• Remote Administration – enable remote configuration of your Verizon Router from any internet-accessible computer.
• LED Brightness - controls the Router Status LED light to either dim or brighten and sets the dimming time of the LED light.

Network Settings

• Network Objects – defines a group, such as a group of computers.
• Network Connections – displays and manages the details of a specific network connection.
• Universal Plug and Play (UPnP) – checks the validity of all UPnP services and rules.
• Port Forwarding Rules – displays port forwarding rules.
• IPv6 – enables IPv6 support.
• Routing – manages the routing and IP address distribution rules.
• IPv4/IPv6 Address Distribution - adds computers configured as DHCP clients to the network.
• Port Configuration – sets up the Ethernet ports as either full- or half-duplex ports, at either 10 Mbps, 100 Mbps, 1000 Mbps or 10 Gigabit.

©2021 Verizon. All Rights Reserved
Date & Time

- Date & Time Settings – sets the time zone and enables automatic time updates.
- Scheduler Rules Settings – limits the activation of firewall rules to specific time periods.

DNS Settings - manages the DNS server host name and IP address.

Monitoring - displays the details and status of:
- System Logging
- Full Status/System wide Monitoring of Connections/Traffic Monitoring
- Bandwidth Monitoring

System Settings - sets up various system and management parameters.

6.0/ FIREWALL

The firewall is the cornerstone of the security suite for your Verizon Router. It has been exclusively tailored to the needs of the residential or office user and is pre-configured to provide optimum security.

The firewall provides both the security and flexibility that home and office users seek. It provides a managed, professional level
of network security while enabling the safe use of interactive applications, such as internet gaming and video conferencing.

Additional features, including surfing restrictions and access control, can also be configured locally through the user interface or remotely by a service provider.

The firewall regulates the flow of data between the local network and the internet. Both incoming and outgoing data are inspected, then either accepted and allowed to pass through your Verizon Router or rejected and barred from passing through your Verizon Router, according to a flexible and configurable set of rules. These rules are designed to prevent unwanted intrusions from the outside, while allowing local network users access to internet services.

The firewall rules specify the type of services on the internet that are accessible from the local network and types of services in the local network that are accessible from the internet.

Each request for a service that the firewall receives is checked against the firewall rules to determine whether the request should be allowed to pass through the firewall. If the request is permitted to pass, all subsequent data associated with this request or session is also allowed to pass, regardless of its direction.

For example, when accessing a website on the internet, a request is sent to the internet for this site. When the request reaches your Verizon Router, the firewall identifies the request type and origin, such as HTTP and a specific computer in the local network. Unless your Verizon Router is configured to block requests of this type
from this computer, the firewall allows this type of request to pass to the internet.

When the website is returned from the web server, the firewall associates the website with this session and allows it to pass; regardless HTTP access from the internet to the local network is blocked or permitted. It is the origin of the request, not subsequent responses to this request, which determines whether a session can be established.

6.0a/ Setting Firewall Configuration

You can select a normal, high, or low security level to limit, block, or permit all traffic. The following table shows request access for each security level.

<table>
<thead>
<tr>
<th>Security Level</th>
<th>Internet Requests</th>
<th>Local Network Requests</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Incoming Traffic</td>
<td>Outgoing Traffic</td>
</tr>
<tr>
<td>High</td>
<td>Blocked</td>
<td>Limited</td>
</tr>
<tr>
<td>Normal</td>
<td>Blocked</td>
<td>Unrestricted</td>
</tr>
<tr>
<td>Low</td>
<td>Unrestricted</td>
<td>Unrestricted</td>
</tr>
</tbody>
</table>

The request access is defined as:

- Blocked traffic - no access allowed, except as configured in Port Forwarding and Remote Access
- Limited - permits only commonly used services, such as email and web browsing
• Unrestricted - permits full access of incoming traffic from the internet and allows all outgoing traffic, except as configured in Access Control

6.0b/ SPECIFYING GENERAL SETTINGS FOR IPV4 OR IPV6

To set your firewall configuration:

1. From the Firewall General settings page, click on desired IPv4 settings/IPv6 settings option to configure IPv4/IPv6 security.
2. Select a security level by clicking one of the radio buttons. Using the Low Security setting may expose the local network to significant security risks, and should only be used for short periods of time to allow temporary network access.

3. Click Apply changes to save changes.

6.0c/ ACCESS CONTROL

You can block individual computers on your local network from accessing specific services on the internet. For example, you could block one computer from accessing the internet, then block a second computer from transferring files using FTP as well as prohibit the computer from receiving incoming email.

Access control incorporates a list of preset services, such as applications and common port settings.

ALLOW OR RESTRICT SERVICES

To allow or restrict services:

1. From the Advanced menu, select Firewall from the left pane and then click Access Control. The Access Control page opens with the Allows and Blocked sections displayed. The Allowed section only displays when the firewall is set to maximum security.
2. To block a service, click **Add**. The **Add Access Control** page displays.

3. To apply the rule to:
   - Networked Computer/Device - select **Any**.
   - Specific devices only - select **User Defined**.
4. In the Protocol field, select the internet protocol to be allowed or blocked. If the service is not included in the list, select User Defined. The Edit Service page displays. Define the service, then click Apply. The service is automatically added to the Add Access Control section.

5. Specify when the rule is active as Always or User Defined.

6. Enter the rule name, specify days of the week, and set the start time and end time when the rule will be active or inactive.

7. Click Apply to save changes.

8. The Access Control page displays a summary of the new access control rule.
DISABLE ACCESS CONTROL

You can disable an access control and enable access to the service without removing the service from the Access Control table. This can make the service available temporarily and allow you to easily reinstate the restriction later.

• To disable an access control, clear the check box next to the service name.
• To reinstate the restriction, select the check box next to the service name.
• To remove an access restriction, select the service and click Remove. The service is removed from the Access Control table.

6.0d/ PORT FORWARDING

You can activate port forwarding to expose the network to the internet in a limited and controlled manner. For example, enabling applications, such as gaming and voice, to work from the local network as well as allowing internet access to servers within the local network.

To create port forwarding rules:

1. From the Advanced menu, select Firewall from the left pane and then click Port Forwarding. The Port Forwarding page opens with the current rules displayed.
2. To create a new rule, enter the application name, configure its inbound and outbound port numbers, then select the protocol.

3. To schedule the rule, select either **Always** or **User Defined** in the **Schedule** list box.

4. Click **Add to list**. The rule displays in the **Rules List** section.

5. Click **Apply changes** to save changes.

### 6.0e/ PORT TRIGGERING

Port triggering can be described as dynamic port forwarding. By setting port triggering rules, inbound traffic arrives at a specific network host using ports that are different than those used for outbound traffic. The outbound traffic triggers the ports where the inbound traffic is directed.

For example, a gaming server is accessed using UDP protocol on port 2222. The gaming server then responds by connecting the user using UDP on port 3333, when a gaming session is initiated.
In this case, port triggering must be used since it conflicts with the following default firewall settings:

- Firewall blocks inbound traffic by default.
- Server replies to your Verizon Router IP, and the connection is not sent back to the host since it is not part of a session.

To resolve the conflict, a port triggering entry must be defined, which allows inbound traffic on UDP port 3333 only after a network host generated traffic to UDP port 2222. This results in your Verizon Router accepting the inbound traffic from the gaming server and sending it back to the network host which originated the outgoing traffic to UDP port 2222.

To configure port triggering:

1. From the Advanced menu, select Firewall and then click Port Triggering.
2. To add a service as an active protocol, enter the application name, configure its inbound and outbound (triggered/forwarded) port range, then select the protocol.

3. To schedule the rule, select either \textit{Always} or \textit{User Defined} in the \textit{Schedule} list box.

4. Click \textit{Add to list}. The rule displays in the \textit{Rules List} section.

5. Click \textit{Apply changes} to save changes.

6. \textbf{DMZ HOST}

DMZ Host allows a single device on your primary network to be fully exposed to the internet for special purposes like internet gaming.

\textit{Warning: Enabling DMZ Host is a security risk. When a device on your network is a DMZ Host, it is directly exposed to the internet and loses much of the protection of the firewall. If it is compromised, it can also be used to attack other devices on your primary network.}

Follow these steps to designate a device on your primary network as a DMZ Host:

1. From the \textit{Advanced} menu, select \textit{Firewall} and then click \textit{DMZ Host}.

2. Select \textit{Enable} for the DMZ Host.

3. Enter the IP address or select the MAC address of the device you want to designate as the DMZ Host.

4. Click \textit{Apply changes} to save changes.
**6.0g/ SIP ALG**

SIP ALG (Application Level Gateway) - supports various multiple application protocols by allowing dynamic ephemeral TCP/ UDP ports to communicate with the known ports which a particular client application (such as FTP, VoIP service, net meeting or streaming media) requires.

*To enable the SIP ALG settings:*

1. From the **Advanced** menu, select **Firewall** and then click **SIP ALG**.
2. Move the selector to **on**
3. Click **Apply changes** to save changes.
Static NAT allows devices located behind a firewall that is configured with private IP addresses to appear to have public IP addresses to the internet. This allows an internal host, such as a web server, to have an unregistered (private) IP address and still be accessible over the internet.

To configure static NAT:

1. From the Advanced menu, select Firewall and then click Static NAT.
2. To create a static NAT, select a source address in the Local Host field.
3. Enter the Public IP Address.
4. If using port forwarding, select the Port Fwd check box.
5. Click Add to list. The rule displays in the Rules List section.
6. Click Apply changes to save changes.
7. Repeat these steps to add additional static IP addresses.
6.0i/ IPV6 PINHOLES

The IPv6 Pinhole feature of the Verizon Router allows an application to send incoming packets for a certain port number to the destination computer by setting up the rule of authorization.

To configure the rules:

1. From the Advanced menu, select Firewall and then click IPv6 Pinhole.

2. Select external and internal host, protocol and the application port type.

3. To schedule the rule, select either Always or User Defined in the Schedule list box.
4. Click **Add to list**. The screen displays opened pinhole port and its status. It shows the IP addresses of remote device and connected device on your network.

5. Click **Apply changes** to save changes.

### 6.1/ UTILITIES

You can access the following advanced settings:

- **Diagnostics** – performs diagnostic tests.
- **Save and Restore** – resets your Verizon Router to its default settings.
- **Reboot Router** – restarts your Verizon Router.
- **MAC Cloning** – clones the MAC address.
- **ARP Table** – displays active devices with their IP and MAC addresses.
- **NDP (Neighbor Discovery Protocol) Table** – displays active devices with their IPv6 and MAC addresses of DHCP connection.
- **Users** – creates and manages remote users.
- **Remote Administration** – enable remote configuration of your Verizon Router from any internet-accessible computer.
- **LED Brightness** - controls the Router Status LED light to either dim or brighten, and sets the dimming time of the LED light.
6.1a/ DIAGNOSTICS

You can use diagnostics to test network connectivity.

To diagnose network connectivity:

1. From the Advanced menu, select Utilities.
2. Select Diagnostics in the Utilities section.
3. To ping an IP address, enter the IP address or domain name in the Destination field and click Go.

The diagnostics will display the number of pings, status, packets sent, and round trip time.

If no diagnostic status displays, click refresh in your web browser.
6.1b/ SAVE AND RESTORE

You can use this functionality to save and load configuration files. These files are used to backup and restore the current configuration of your Verizon Router.

Only configuration files saved on a specific Verizon Router can be applied to that Verizon Router. You cannot transfer configuration files between Verizon Routers.

Warning: Manually editing a configuration file can cause your Verizon Router to malfunction or become completely inoperable.

Save Options

To save the configuration file:

1. Select Save & Restore in the Utilities section.
 UTILITIES

2. Select **Save to router and your Verizon account** or **Save as file** to save the current configuration, then click **Save as configuration**.

3. If you select **Save as file**, the configuration file is saved to your web browser’s download folder.

**Restore Options**

You can restore your configuration settings to your Verizon Router factory default settings. Restoring the default settings erases the current configuration, including user defined settings and network connections. All connected DHCP clients must request new IP addresses. Your Verizon Router must restart.

Prior to restoring the factory defaults, you may want to save your current configuration to a file. This allows you to reapply your current settings and parameters to the default settings, as needed.

**Note:** When restoring defaults, the setting and parameters of your Verizon Router are restored to their default values. This includes the administrator password. A user-specified password will no longer be valid.

**To backup your Verizon Router’s settings:**

1. Select **Save & Restore** in the **Utilities** section.

2. To take a backup of the current settings, click **Automated Backups** or **Manual Backup**. You will be prompted to save a file with the extension “.enc”.

3. Click **Backup** to begin the configuration backup process.
To restore your Verizon Router’s factory default settings:

1. Select **Save & Restore** in the **Utilities** section.
2. Click **Factory Defaults**.

   - **Default Settings** – will erase all router settings including user settings for SSID and Passwords.
   - **Default Settings except current user settings** – will erase all router settings but will retain the user settings for SSID and passwords.

3. Click **Restore configuration** button. The factory default settings are applied and your Verizon Router restarts. Once complete, the Login page for the First Time Easy Setup Wizard displays.
UTILITIES

To load the configuration file:

1. Select **Save & Restore** in the **Utilities** section.
2. To load a previously saved configuration file, click **choose file**.
3. Browse to the location of the file, and click **Restore configuration** button to begin the configuration uploading process.
4. Accessing the Verizon app or the **My Verizon** account also allows you to restore the previously saved settings. Click **Restore From Account** and select **Go to Apple App Store/Go to Google Play Store** to restore the saved settings to the router.
5. Click **Restore configuration** button. Your Verizon Router will automatically restart with that configuration.

6.1c/ REBOOT VERIZON ROUTER

*Warning:* Only select Reboot Router if instructed to do so by Verizon support.

You can reboot your Verizon Router using the Reboot Router Only feature. Refer to 1.3b/ REAR PANEL for power button options.

To reboot your Verizon Router using the user interface:

1. Select **Reboot Router** in the **Utilities** section.
2. To reboot, click **Reboot Device**. Your router will reboot. This may take up to a minute.

3. To access your Verizon Router user interface, refresh your web browser.

4. After the Router Status LED on the front panel turns solid white, you will automatically be sent to the web browser login page.

### 6.1d/ MAC CLONING

A MAC address is a hexadecimal code that identifies a device on a network. All networkable devices have a unique MAC address.

When replacing a network device on your Verizon Router, you can simplify the installation process by copying the MAC address of the existing device to your Verizon Router.

*To copy the MAC address of the existing device:*

1. Select **MAC Cloning** in the **Utilities** section.
2. In the **To physical address** field, enter the MAC address of your new device.

3. To locate the MAC address, refer to the documentation from the device manufacturer.

4. Click **Apply** to save changes.

**6.1e/ ARP TABLE**

You can view the IPv4 and MAC addresses of each DHCP connection.

*To view the IPv4 and MAC addresses for each device: select ARP Table in the Utilities section.*
**6.1f/ NDP TABLE**

You can view the IPv6 and MAC addresses of each DHCP connection.

*To view the IPv6 and MAC addresses for each device:* select **NDP** (Neighbor Discovery Protocol) **Table** in the **Utilities** section.
6.1g/ USERS

You can view the users that can currently access your Wi-Fi network. In addition, you can modify their login password and name as well as manage the number of unsuccessful login attempts a user can enter before your Verizon Router temporarily denies all further login attempts by that user.

To view users:

1. Select **Users** in the **Utilities** section.

2. In the **Login Configuration** section, enter the maximum number of unsuccessful login attempts.

3. To edit usernames and passwords, click the **Edit** in the **Action** column. The **Edit User Settings** page displays.
4. Edit the Full name, User name and set a new password.

5. To add a new user, specify the following parameters:
   - **Full Name** - name of the user.
   - **User Name** – name the user enters to remotely access the home or office network. This field is case-sensitive.

6. Verify the level of access for the user in the **Permissions** field.

7. Click **Apply changes** to save changes. The **Users** page opens with the user information displayed.
6.1h/ REMOTE ADMINISTRATION

Caution: Enabling Remote Administration places your Verizon Router network at risk from outside attacks.

You can access and control your Verizon Router not only from within the local network, but also from the internet using Remote Administration.

You can allow incoming access to the following:

- **Allow incoming WAN Access to Web Management** - used to obtain access to your Verizon Router’s UI and gain access to all settings and parameters through a web browser.
- **Diagnostic Tools** - used for troubleshooting and remote system management by a user or Verizon.

Web Management remote administration access may be used to modify or disable firewall settings. Web Management services should be activated only when absolutely necessary.

To enable remote administration:

1. Select **Remote Administration**.
2. To enable access, select the check box.
3. To remove access, clear the check box.
4. Click **Apply changes** to save changes.
6.1i/ LED BRIGHTNESS

The Verizon Router allows you to set the LED brightness to turn Off (0%) or stay bright (50% or 100%) using the user interface.

To control the LED brightness:

1. Select **LED Brightness** in the **Utilities** section.

2. Slide the bar to adjust the brightness of the LED.

3. Click **Apply changes** to save changes.

*Note: The light will activate again on status changes like WPS pairing or loss of connection.*
6.2/ NETWORK SETTINGS
You can configure the following network settings:

- **Network Objects** – defines a group, such as a group of computers.
- **Network Connections** – displays and manages the details of a specific network connection.
- **Universal Plug and Play (UPnP)** – checks the validity of all UPnP services and rules.
- **Port Forwarding Rules** – displays port forwarding rules.
- **IPv6** – enables IPv6 support.
- **Routing** – manages the routing and IP address distribution rules.
- **IPv4/IPv6 Address Distribution** - adds computers configured as DHCP clients to the network.
- **Port Configuration** – sets up the Ethernet ports as either full- or half-duplex ports, at either 10 Mbps, 100 Mbps, or 1000 Mbps.

6.2a/ NETWORK OBJECTS
Network objects define a group, such as a group of computers, on your Verizon Router network by MAC address, IP address, and/or host name. The defined group becomes a network object. You can apply settings, such as configuring system rules, to all devices defined in the network object.
NETWORK SETTINGS

For example, instead of setting the same website filtering configuration individually to five computers one at a time, you can define the computers as a network object. Website filtering can then be simultaneously applied to all the computers.

You can use network objects to apply security rules based on host names, instead of IP addresses. This is useful since IP addresses change from time to time. In addition, you can define network objects according to MAC address to make the rule application more persistent against network configuration settings.

To define a network object:

1. From the Advanced menu, select Network Settings.
2. Select Network Objects in the Network Settings section.
3. To define a network object, click Add new. The Edit Network Objects page displays.
4. In the Description field, enter a name for the network object.

5. Click Add. The Edit Item page displays.

6. Select and configure the type of network object as IP address, IP subnet, IP range, MAC address, host name, or DHCP option, and click Apply to save changes.

7. Repeat the above steps to create additional network objects.

8. When complete, click Apply changes to save changes.
6.2b/ NETWORK CONNECTIONS

Caution: The settings described in this chapter should only be configured by experienced network technicians. Changes could adversely affect the operation of your router and your local network.

To view the network connections:

1. From the Advanced menu, select Network Settings from the left pane and then click Network Connections.

2. To view and edit the details of a specific network connection, click the hyperlinked name or the action icon. The following sections detail the types of network connections that you can view.
NETWORK (HOME/OFFICE) CONNECTION

You can view the properties of your local network. This connection is used to combine several network interfaces under one virtual network. For example, you can create a home/office network connection for Ethernet and other network devices.

Note: When a network connection is disabled, the underlying devices formerly connected to it will not be able to obtain a new DHCP address from that Verizon Router network interface.

To view the connection:

1. On the Network Connections page, click the Network (Home/Office) connection link. The Network (Home/Office) Properties page displays.
2. To rename a network connection, enter the new network name in the **Name** field.

3. Click **Save** to save the changes.

**CONFIGURING THE HOME/OFFICE NETWORK**

*To configure the network connection:*

1. In the **Network (Home/Office) Properties** page, click **Settings**. The configuration page displays.
2. Configure the following sections, as needed.

**General**

In the **General** section, verify the following information:

- **Status** - displays the connection status of the network.
- **Connection Type** - displays the type of connection interface.
- **Physical Address** - displays the physical address of the network card used for the network.
- **MTU** - displays the Maximum Transmission Unit (MTU) indicating the largest packet size permitted for internet transmissions:
- **Automatic**: sets the MTU (Maximum Transmission Unit) at 1500.
- **Automatic by DHCP**: sets the MTU according to the DHCP connection.
- **Manual**: allows you to manually set the MTU.

• **Internet Protocol**

  In the Internet Protocol section, specify one of the following:

  - **No IPv4 Address**: the connection has no IP address. This is useful if the connection operates under a bridge.
  - **Obtain an IPv4 Address Automatically**: the network connection is required by Verizon to obtain an IP address automatically. The server assigning the IP address also assigns a subnet mask address, which can be overridden by entering another subnet mask address.
  - **Use the Following IP Address**: the network connection uses a permanent or static IP address and Subnet Mask address, provided by Verizon or experienced network technician.
NETWORK SETTINGS

Bridge

In the Bridge section of the Network (Home/Office) Properties, you can configure the various LAN interfaces.

Caution: Do not change these settings unless specifically instructed to by Verizon. Changes could adversely affect the operation of your Verizon Router and your local network.

Verify the following information:

- Status – displays the connection status of a specific network connection.
- Action – contains an Edit hyperlink that, when clicked, generates the next level configuration page for the specific network connection or network device.

IP Address Distribution

The IP Address Distribution section is used to configure the Dynamic Host Configuration Protocol (DHCP) server parameters of your Verizon Router.

Once enabled and configured, the DHCP server automatically assigns IP addresses to any network devices which are set to obtain their IP address dynamically.
If DHCP Server is enabled on your Verizon Router, configure the network devices as DHCP Clients. There are 2 basic options in this section: **Disabled** and **DHCP Server**.

**To set up the Verizon Router’s network bridge to function as a DHCP server:**

1. In the **IP Address Distribution** section, select the **DHCP server**. Once enabled, the DHCP server provides automatic IP assignments (also referred to as IP leases) based on the preset IP range defined below.
   - **Start IP Address** – Enter the first IP address in the IP range that the Verizon Router will automatically begin assigning IP addresses from. Since your Verizon Router’s IP address is 192.168.1.1, the default Start IP Address is 192.168.1.2.
   - **End IP Address** – Enter the last IP address in the IP range that the Verizon Router will automatically stop the IP address allocation at. The maximum end IP address range that can be entered is 192.168.1.254.

2. If Windows Internet Naming Service (WINS) is being used, enter the **WINS Server** address.

3. In the **Lease Time in Minutes** field, enter the amount of time a network device is allowed to connect to the Verizon Router with its currently issued dynamic IP address.
IP Address Distribution According to DHCP option 60 (vendor class Identifier)

DHCP vendor class is related to DHCP option 60 configuration within the router. Adding option 60 configurations allows a particular vendor to get a lease from a specified pool of addresses.

Click **Save Changes** to save changes.

Routing Table

You can configure your Verizon Router to use static or dynamic routing.

- **Static routing** – specifies a fixed routing path to neighboring destinations based on predetermined metrics.
- **Dynamic routing** – automatically adjusts how packets travel on the network. The path determination is based on network/device reachability and the status of the network being traveled.

*To configure routing:*

1. In the **Routing Table** section, click **Add new route** button to display and modify the new route configuration page.
To save your changes click Apply.

WI-FI ACCESS POINT CONNECTION

A Wi-Fi Access Point network connection allows Wi-Fi devices to connect to the local area network (LAN) using the 2.4 GHz, 5 GHz or 6 GHz Wi-Fi network.

Note: Once disabled, all Wi-Fi devices connected to that Wi-Fi network will be disconnected from the LAN network and internet.

To view the connection settings:

1. From the Advanced menu, select Network Settings from the left pane and then click Network Connections.

2. On the Network Connections page, click the Network (Home/Office) connection link. The Network (Home/Office) Properties page displays.
3. To access the connection settings pages, click on the link of any of the connections listed under Network name.

4. From the connection’s Enable Settings page, to enable or disable the connection, move the selector to on or off.

5. To rename the connection, enter a name in the Name field.

6. Click Apply to save the changes.

7. Reboot your Verizon Router.

CONFIGURING Wi-Fi ACCESS POINT PROPERTIES

To configure the connection:

1. On the bottom of the Access Points specific Enable Settings page, click Settings. The configuration page displays.
2. Verify the following information:
   - **Status** - displays the connection status of the network.
   - **Network** – displays the type of network connection.
   - **Connection Type** - displays the type of connection interface.
   - **Physical Address** - displays the physical address of the network card used for the network.
   - **MTU** - specifies the largest packet size permitted for internet transmissions:
     - **Automatic**: set the MTU (Maximum Transmission Unit) at 1500.
     - **Automatic by DHCP**: sets the MTU according to the DHCP connection.
     - **Manual**: allows you to manually set the MTU.

3. Click **Apply** to save changes.
ETHERNET CONNECTION

You can view the properties of your Ethernet LAN connection using an Ethernet cable inserted into one of your Verizon Router’s Ethernet LAN ports.

To view the connection settings:

1. In the Network Connections page, click the Network(Home/Office) connection link.

2. Next, to access the Ethernet properties page, click the Ethernet link listed under the Underlying Device section.

3. To rename the network connection, enter the new name in the Name field.

4. Click Apply to save changes.
CONFIGURING ETHERNET PROPERTIES

To configure the connection:

1. In the Ethernet page, click Settings. The configuration page displays.

2. Configure the following settings, as needed.

General

Verify the following information:

- **Status** - displays the connection status of the network.
- **Network** – displays the type of network connection.
- **Connection Type** - displays as Hardware Ethernet Switch.
NETWORK SETTINGS

- **Physical Address** - displays the physical address of the network card used for the network.
- **MTU** - specifies the largest packet size permitted for:
  - **Automatic**: sets the MTU (Maximum Transmission Unit at 1500).
  - **Automatic by DHCP**: sets the MTU according to the DHCP connection.
  - **Manual**: allows you to manually set the MTU.
- **HW Switch Ports** - displays the status of each LAN port.

3. Click **Apply** to save the changes.

COAX
To view the connection settings:

1. In the **Network Connections** page, click the **Coax** link.
2. From the connection’s **Enable Settings** page, to enable or disable the connection, move the selector to on or off.
3. To rename the network connection, enter the new name in the **Name** field.
4. Click **Apply** to save changes.

**CONFIGURING COAX PROPERTIES**

To configure the connection:

1. In the **Coax** page, click **Settings**. The configuration page displays.
2. Configure the following settings, as needed.

**General**

Verify the following information:

- **Status** - displays the connection status of the network.
- **Network** – displays the type of network connection.
- **Connection Type** - displays the type of connection interface.
- **Physical Address** - displays the physical address of the network card used for the network.
- **MTU** - specifies the largest packet size permitted for internet transmissions:
  - **Automatic**: sets the MTU (Maximum Transmission Unit at 1500).

**Coax Link**

- **Privacy** - to set Privacy, select the **Enabled** check box. This causes all devices connected to the coaxial cable to use the same password. This is recommended. To set the password, enter the Coax Link password in the **Manual entry of privacy password** field.
- To enable or disable the Coax link, click **Enable** or **Disable**.
- To view the devices connected using the coaxial cable, click the **Go to LAN Coax Status** link.

3. Click **Apply** to save changes.
BROADBAND CONNECTION (ETHERNET)

You can view the properties of your broadband connection (your connection to the internet). This connection may be via Ethernet cable.

To view the connection settings:

1. In the **Network Connections** page, click the **Broadband Connection (Ethernet)** link.
CONFIGURING BROADBAND CONNECTION

To configure the connection:

1. In the Broadband Connection (Ethernet) Properties page, click Settings. The configuration page displays.
2. Configure the following settings, as needed.

**General**

Verify the following information:

- **Status** - displays the connection status of the network.
- **Network** – displays the type of network connection.
- **Connection Type** - displays the type of connection interface.
- **Physical Address** - displays the physical address of the network card used for the network.
- **MTU** - specifies the largest packet size permitted for internet transmissions:
  - **Automatic**: sets the MTU (Maximum Transmission Unit at 1500).
  - **Automatic by DHCP**: sets the MTU according to the DHCP connection.
  - **Manual**: allows you to manually set the MTU.

---

**6.2c/ UNIVERSAL PLUG AND PLAY**

You can use Universal Plug and Play (UPnP) to support new devices without configuring or rebooting your Verizon Router.

In addition, you can enable the automatic cleanup of invalid rules. When enabled, this functionality verifies the validity of all UPnP services and rules every five minutes. Old and unused UPnP defined services are removed, unless a user-defined rule depends on it.
UPnP services are not deleted when disconnecting a computer without proper shutdown of the UPnP applications, such as messenger. Services may often not be deleted and eventually this leads to the exhaustion of rules and services. No new services can be defined. The cleanup feature locates the invalid services and removes them, preventing services exhaustion.

To access this setting:

1. Select **Universal Plug & Play** in the **Network Settings** section.

2. To enable UPnP and allow UPnP services to be defined on any network hosts, select the **UPnP Enabled** check box.

3. To enable automatic cleanup of invalid rules, select **Enable Automatic Cleanup of Old Unused UPnP Services** check box.

4. Click **Apply changes** to save changes.
6.2d/ PORT FORWARDING RULES
You can view, modify, and delete port forwarding rules.

To access the rules:

1. Select Port Forwarding Rules in the Network Settings section.

2. To create or edit a protocol rule, click the Add new or Edit icon in the Action column. The Edit Service page displays.
3. Modify the **Service Name** and **Service Description**, as needed.

4. To add server ports, click **Add**.

5. To modify the current protocol, click the **Edit** icon in the **Action** column. The **Edit Service Server Ports** page displays.
6. Enter the Protocol, Source Ports and Destination Ports, as needed.

7. Click Apply to save changes.

6.2e/ IPV6

Use the IPv6 feature settings to enable, disable, or configure an IPv6 Internet connection and IPv6 LAN settings.

1. To configure your network to use the IPv6 Internet connection type, select IPv6 from the Advanced page to display the IPv6 service options:
2. Select **Enable** in the **Enable IPv6 Support** field. (Once IPv6 is enabled the default setting will be IPv6 WAN as DHCPv6 and IPv6 LAN as Stateless).

3. Select the appropriate IPv6 connection method from the dropdown list (DHCPv6 or Static) to specify the method to be used to obtain your WAN IPv6 Address.

4. Click **Apply changes** to have changes take effect.

   **Note:** *The Internet IPv6 service is required for this feature to work over the internet.*

5. To disable the IPv6 service, click on the **Disable** option in the **Enable IPv6 Support** field.

6. Click **Apply changes** to have changes take effect.
NETWORK SETTINGS

Once configured using valid IPv6 WAN and LAN configurations, you should not see any errors when you click on the **Apply changes** button and the **Status** page on the main menu will reflect the router’s new IPv6 address.

You should also see the IPv6 address for all IPv6 supported devices on your local network displayed on the **Basic/Devices/Devices** page by selecting **Expanded List** from the dropdown list.

![Network Settings Page](https://via.placeholder.com/150)

### Static - WAN IPv6 Address Connection

The IPv6 WAN Static configurations are IPv6 settings that you enter manually. These specific IPv6 addresses and settings are not expected to change frequently.

1. To configure IPv6 WAN Static mode, select the **Static** option on the **IPv6 Configuration Control** page as shown below:
2. Specify the Static method to be used to obtain your WAN IPv6 Address by entering:
   - IPv6 WAN Configuration (select Static)
   - Assigned Prefix (A numeric value between 16 and 128)
   - IPv6 WAN Address
   - Default Gateway: Verizon Router
   - IPv6 (Primary) DNS Address 1
   - IPv6 (Secondary) DNS Address 2

3. After entering all appropriate IPv6 settings, click **Apply changes** to have changes take effect.
Static WAN with LAN IPv6 Stateful Settings

1. To configure IPv6 LAN Stateful mode with Static WAN, select the Stateful (DHCPv6) option on the IPv6 Configuration Control page as shown below:

2. Specify the Stateful (DHCPv6) settings to be used to assign LAN IPv6 addresses by entering the following details:
   - IPv6 LAN Configuration (select Stateful from the dropdown list)
   - LAN Prefix (automatically populated)
   - IPv6 LAN Address (automatically populated)
   - DHCPv6 Client Address Range (start and end)
   - LAN Link Local Address (automatically populated)
• **Subnet ID** - set the site topology for your internal site
• **Router Advertisement Lifetime** (minutes between 0-150)
• **IPv6 Address Lifetime** (minutes between 3-150)
• **Option: Allow ICMPv6 Echo Request for LAN devices using their Global IPv6 Address from WAN side** - requesting an IPv6 address from any available DHCPv6 servers available on the ISP

3. After entering all appropriate IPv6 settings, click **Apply changes** to have changes take effect.

**Static WAN with LAN IPv6 Stateless Settings**

1. To configure IPv6 LAN Stateless mode with **Static WAN**, select the **Stateless** option on the **IPv6 Configuration Control** page as shown below:
2. Specify the settings to be used to assign LAN IPv6 addresses by entering the following details:
   - **IPv6 LAN Configuration** (select Stateless from the dropdown list)
   - **LAN Prefix** (automatically populated)
   - **IPv6 LAN Address** (automatically populated)
   - **LAN Link Local Address** (automatically populated)
   - **Subnet ID** - set the site topology for your internal site
   - **Router Advertisement Lifetime** (minutes between 0-150)
   - **Option: Allow ICMPv6 Echo Request for LAN devices using their Global IPv6 Address from WAN side** - requesting an IPv6 address from any available DHCPv6 servers available on the ISP

3. After entering all appropriate IPv6 settings, click **Apply changes** to have changes take effect.

**DHCPv6 PD - WAN IPv6 Address Connection**

The IPv6 WAN DHCPv6 configurations are IPv6 settings that you enter that will allow your IPv6 connection to be updated by the ISP as needed.

1. To configure IPv6 WAN Stateful (DHCPv6) mode, select the **DHCPv6-PD** option on the **IPv6 Configuration Control** page as shown below:
2. Check to either **Obtain IPv6 DNS Server address automatically**, or **Use the following IPv6 DNS Server addresses**

3. After entering all appropriate IPv6 settings, click **Apply changes** to have changes take effect.

**DHCPv6 WAN with LAN IPv6 Stateful (DHCPv6) Settings**

1. To configure IPv6 WAN Stateful (DHCPv6) mode, select the **Stateful (DHCPv6)** option on the **IPv6 Configuration Control** page as shown below:
2. Specify the **Stateful (DHCPv6)** settings to be used to assign LAN IPv6 addresses by entering the following details:

- **IPv6 LAN Configuration** (select Stateful from the dropdown list)
- **LAN Prefix** (automatically populated)
- **IPv6 LAN Address** (automatically populated)
- **DHCPv6 Client Address Range** (start and end)
- **LAN Link Local Address** (automatically populated)
• **Subnet ID** - set the site topology for your internal site
• **Router Advertisement Lifetime** (minutes between 0-150)
• **IPv6 Address Lifetime** (minutes between 3-150)
• **Option: Allow ICMPv6 Echo Request for LAN devices using their Global IPv6 Address from WAN side** - requesting an IPv6 address from any available DHCPv6 servers available on the ISP

3. After entering all appropriate IPv6 settings, click **Apply changes** to have changes take effect.

### DHCPv6 WAN with LAN IPv6 Stateless Settings

1. To configure IPv6 LAN Stateless mode with DHCPv6 WAN, select the **Stateless** option on the **IPv6 Configuration Control** page as shown below:
2. Specify the settings to be used to assign LAN IPv6 addresses by entering the following details:
   - **IPv6 LAN Configuration** (select Stateless from the dropdown list)
   - **LAN Prefix** (automatically populated)
   - **IPv6 LAN Address** (automatically populated)
   - **LAN Link Local Address** (automatically populated)
   - **Subnet ID** - set the site topology for your internal site
   - **Router Advertisement Lifetime** (minutes between 0-150)
   - **Option: Allow ICMPv6 Echo Request for LAN devices using their Global IPv6 Address from WAN side** - requesting an IPv6 address from any available DHCPv6 servers available on the ISP

3. After entering all appropriate IPv6 settings, click **Apply changes** to have changes take effect.

**LAN IPv6 Configuration without An IPv6 WAN Connection**

1. To configure IPv6 to use either the IPv6 LAN Stateful or Stateless mode without using an IPv6 Internet WAN connection, select the **None** option on the **IPv6 Configuration Control** page.
2. After entering all appropriate IPv6 settings, click **Apply changes** to have changes take effect.

**LAN IPv6 Stateful (DHCPv6) with No WAN Settings**

1. To configure IPv6 LAN Stateful mode with No WAN connection, select the Stateful option on the IPv6 Configuration Control page as shown below:
2. Specify the **Stateful (DHCPv6)** settings to be used to assign LAN IPv6 addresses by entering the following details:

- **IPv6 LAN Configuration** (select Stateful from the dropdown list)
- **LAN Prefix** (automatically populated)
- **IPv6 LAN Address** (automatically populated)
- **DHCPv6 Client Address Range** (start and end)
- **LAN Link Local Address** (automatically populated)
- **Subnet ID** - set the site topology for your internal site
- **Router Advertisement Lifetime** (minutes between 0-150)
- **IPv6 Address Lifetime** (minutes between 3-150)
• Option: Allow ICMPv6 Echo Request for LAN devices using their Global IPv6 Address from WAN side - requesting an IPv6 address from any available DHCPv6 servers available on the ISP

3. After entering all appropriate IPv6 settings, click Apply changes to have changes take effect.

LAN IPv6 Stateless with No WAN Settings

1. To configure IPv6 LAN Stateless mode with No WAN connection, select the Stateless option on the IPv6 Configuration Control page as shown below:

2. Specify the settings to be used to assign LAN IPv6 addresses by entering the following details:
   • IPv6 LAN Configuration (select Stateless from the dropdown list)
NETWORK SETTINGS

- LAN Prefix (automatically populated)
- IPv6 LAN Address (automatically populated)
- LAN Link Local Address (automatically populated)
- Subnet ID - set the site topology for your internal site
- Router Advertisement Lifetime (minutes between 0-150)
- Option: Allow ICMPv6 Echo Request for LAN devices using their Global IPv6 Address from WAN side - requesting an IPv6 address from any available DHCPv6 servers available on the ISP

3. After entering all appropriate IPv6 settings, click Apply changes to have changes take effect.

6.2f/ ROUTING SETTINGS

You can view the routing and IP address distribution rules as well as add, edit, or delete the rules.

Routing Table

To view the rules:

1. Select Routing in the Network Settings section.
2. To add a new Route, click **New Route**.

3. Specify the following parameters:
   - **Routing Entry** - select the IP address type.
   - **Name** – the network connection type.
**NETWORK SETTINGS**

- **Destination** - enter the destination IP of the destination host, subnet address, network address, or default route. The destination for a default route is 0.0.0.0.
- **Netmask** – enter the network mask. This is used in conjunction with the destination to determine when a route is used.
- **Gateway** – enter the IP address of your Verizon Router.
- **Metric** – enter a measurement preference of the route. Typically, the lowest metric is the most preferred route. If multiple routes exist to a specific destination network, the route with the lowest metric is used.

4. Click **Apply changes** to save changes.

**Internet Group Management Protocol (IGMP)**

IGMP allows for managing a single upstream interface and multiple downstream interfaces of the IGMP/MLD (Multicast Listener Discovery)-based forwarding. This function enables the system to send IGMP host messages on behalf of hosts that the system discovers through standard IGMP interfaces. Also, IGMP snooping allows an Ethernet switch to “listen in” on the IGMP conversation between hosts and routers, while IGMP querier will send out periodic IGMP queries.

*To enable this function:*

1. Choose the IGMP interfaces by clicking on the checkboxes on the screen.
2. Click **Apply changes** to save changes.
**6.2g/ IPV4 ADDRESS DISTRIBUTION**

You can easily add computers configured as DHCP clients to the network. The DHCP server provides a mechanism for allocating IP addresses to these hosts and for delivering network configuration parameters to the hosts.

For example, a client (host) sends a broadcast message on the network requesting an IP address for itself. The DHCP server then checks its list of available addresses and leases a local IP address to the host for a specific period of time and simultaneously designates this IP address as taken. At this point, the host is configured with an IP address for the duration of the lease.

The host can renew an expiring lease or let it expire. If it renews a lease, the host receives current information about network services, as it did during the original lease, allowing it to update its network configurations to reflect any changes that occurred since the first connection to the network.

If the host wishes to terminate a lease before its expiration, it sends a release message to the DHCP server. This makes the IP address available for use by other hosts.

*The DHCP server performs the following functions:*

- Displays a list of all DHCP host devices connected to your Verizon Router
- Defines the range of IP addresses that can be allocated in the network
- Defines the length of time the dynamic IP addresses are allocated
NETWORK SETTINGS

- Provides the above configurations for each network device and can be configured and enabled or disabled separately for each network device
- Assigns a static lease to a network computer to receive the same IP address each time it connects to the network, even if this IP address is within the range of addresses that the DHCP server may assign to other computer
- Provides the DNS server with the host name and IP address of each computer connected to the network

To view a summary of the services provided by the DHCP server:

1. Select IPv4 Address Distribution in the Network Settings section.

2. You can edit the DHCP server settings for a device. On the IPv4 Address Distribution page, click the Edit icon in the Action column. The DHCP Settings page opens with the device information displayed.

3. To enable the DHCP server, select DHCP Server in the IPv4 Address Distribution field.
4. Once enabled, the DHCP server provides automatic IP assignments (IP leases) based on the preset IP range defined below.

5. To configure the DHCP server, complete the following fields:
   - **Start IP Address** – enter the first IP address that your Verizon Router will automatically begin assigning IP addresses from. Since your Verizon Router’s default IP address is 192.168.1.1, the default start IP address should be 192.162.1.2.
   - **End IP Address** – enter the last IP address that your Verizon Router will stop at for the IP address allocation. The maximum end IP address range that can be entered is 192.168.1.254.
• **WINS Server** – determines the IP address associated with a network device.

• **Lease Time in Minutes** – assigns the amount of time in minutes that each device is assigned an IP address by the DHCP server when it connects to the network.

When the lease expires, the server determines if the computer has disconnected from the network. If it has, the server may reassign this IP address to a newly connected computer.

6. Click **Apply** to save changes.

**IPv4 Address Distribution According to DHCP option 60 (Vendor Class Identifier)**

DHCP vendor class is related to DHCP option 60 configuration within the router. User can add option 60 configurations such that particular vendor can get lease from a specified pool of address. The existing vendor class ID, IP address, MAC address and QoS are shown on the screen above.

**DHCP Connection List**

You can view a list of the connections currently assigned and recognized by the DHCP server.

*To view a list of computers:*

1. On the *IPv4 Address Distribution* page, click **Connection List**.
To define a new static connection with a fixed IP address, click **Add static connection**.

1. **Enter the host name.**
2. **Enter the fixed IP address to be assigned.**
3. **Enter the MAC address of the network interface of the computer used with this DHCP static connection.**
4. **Click **Apply** to save changes.**
6.2h/ IPV6 ADDRESS DISTRIBUTION

To view a summary of the services provided by the DHCP server:

1. Select IPv6 Address Distribution in the Network Settings section.

2. You can edit the DHCP server settings for a device. On the IPv6 Address Distribution page, click the Edit icon in the Action column. The DHCP Settings page opens with the device information displayed.

3. To configure the DHCP server complete the following fields:
   - Start IPv6 Address – the starting IPv6 address in the consecutive list of addresses that makes up this LAN pool for the DHCPv6 server.
   - End IPv6 Address – the ending IPv6 address in the consecutive list of addresses that makes up this LAN pool for the DHCPv6 server.
• **Lease Time in Minutes** – assigns the amount of time in minutes that each device is assigned an IP address by the DHCP server when it connects to the network.

When the lease expires, the server determines if the computer has disconnected from the network. If it has, the server may reassign this IP address to a newly connected computer.

4. Click **Apply** to save changes.

**DHCP Connection List**

You can view a list of the connections currently assigned and recognized by the DHCP server.

*To view a list of computers:*

1. On the **IPv6 Address Distribution** page, click **Connection List**.
2. To define a new static connection with a fixed IP address, click **Add static connection**.
3. Enter the host name.
4. Enter the fixed IP address to be assigned.
5. Enter the MAC address of the network interface of the computer used with this DHCP static connection.
6. Click **Apply** to save changes.
6.2i/ PORT CONFIGURATION

Ethernet port configuration allows you to set up the Ethernet ports as either full- or half-duplex ports, at either 10 Mbps, 100 Mbps, or 1000 Mbps.

To configure the ports:

1. Select Port Configuration in the Network Settings section.

2. To emulate the speed and duplex configuration of the port with which it’s communicating, select Auto or select the port speed and duplicity.

3. Click Apply changes to save changes.
**6.3/ DATE & TIME**

You can configure the following settings:

- **Date & Time Settings** – sets the time zone and enables automatic time updates.
- **Scheduler Rules Settings** – limits the activation of firewall rules to specific time periods.

**6.3a/ DATE & TIME SETTINGS**

You can set the time zone and enable automatic time updates.

*To configure the settings:*

1. From the **Advanced** menu, select **Date & Time**.
2. Select **Date & Time** in the **Date & Time** section.
3. Select the local time zone. Your Verizon Router automatically detects daylight saving times for selected time zone.

4. In the **Automatic Time Update** section, select the **Enabled** checkbox to perform an automatic time update.

5. Define the time server addresses by clicking **Add**. The **Time Server Settings** page displays.

6. Enter the IP address or domain name of the time server, then click **Apply changes** to save changes.

---

**6.3b/ SCHEDULER RULES**

Scheduler Rules are used for limiting the activation of firewall rules to specific time periods. The time periods are either for days of the week or for hours of each day based on activity or inactivity.

To define a rule:

1. Verify that the date and time of your Verizon Router is correct.

2. Select **Scheduler Rules** in the **Date & Time** section.
3. Click Add. The Set Rule Schedule page displays.

4. Enter the name of the rule, select the active or inactive days of the week and the start and end time range.

5. Specify if the rule is active at the scheduled time or inactive at the scheduled time.

6. Click Apply changes to save changes.
6.4/ DNS SETTINGS

You can view and manage the DNS server host name and IP address as well as add a new computer. The DNS server does not require configuration.

6.4a/ DYNAMIC DNS

Typically, when connecting to the internet, your router is assigned an unused public IP address from a pool, and this address changes periodically.

Dynamic DNS allows a static domain name to be mapped to the dynamic IP address, allowing a computer within your network to be more easily accessible from the internet.

When using Dynamic DNS, each time the public IP address changes, the DNS database is automatically updated with the new IP address. In this way, even though the IP address changes often, the domain name remains constant and accessible.

To set up dynamic DNS:

1. From the Advanced menu, select DNS Settings.
2. Select Dynamic DNS in the DNS Settings section.
3. To set up a new entry, click the **Add** button.

4. Configure the following parameters:
   - **Host Name** – enter the full domain name for your Dynamic DNS domain.
   - **Provider** – select the Dynamic DNS account provider from the menu.
DNS SETTINGS

- **User Name** – enter your user name for your Dynamic DNS account.
- **Password** – enter the password for your Dynamic DNS account.
- **SSL Mode** – select if your Dynamic DNS service supports SSL.

5. Click **Apply** to save your changes.

*To edit the host name or IP address:*

1. In the **Action** column, click the **Edit** icon. The DNS Entry page displays.
2. Edit the settings.
3. Click **Apply** to save the changes.

**6.4b/ DNS SERVER**

You can edit the host name and/or IP address, if the host was manually added to the DNS table. If not, you can only modify the host name.

*To access the DNS server:*

1. Select **DNS Server** in the **DNS** section.
2. To disable DNS rebind protection, untick the checkbox of Enable DNS Rebind Protection.

**Warning:** Disabling this protection may create a risk of cybersecurity attack to devices connected to this router.

3. To view and add computers stored in the DNS table, click Add DNS Entry. The DNS Entry page displays.
4. In the **Host Name** field, enter the name of the computer, then enter the **IP address** and click **Apply** to save changes.

5. Then the **DNS Server** page displays.

6. To edit the host name or IP address, click the **Edit** icon in the **Action** column. The **DNS Entry** page displays. Edit the host name and/or IP address.

7. To remove a host from the DNS table, click the **Delete** icon in the **Action** column.

8. Click **Apply changes** to save changes.

### 6.5/ MONITORING

You can view the details and status of:

- System Logging
- Full Status/System wide Monitoring of Connections/Traffic Monitoring
- Bandwidth Monitoring

### 6.5a/ SYSTEM LOGGING

System logging provides a view of the most recent activity of your Verizon Router. In addition, you can view additional logs, such as the security, advanced, firewall, WAN, DHCP, and LAN DHCP.

**To view the system log:**

1. From the **Advanced** menu, select **Monitoring**.
2. In the **Monitoring** section, click the **System Logging** link.
3. To view a specific time of log event, click on the **options** button.

4. Click **Save** to save changes.
5. To view a specific type of log event such as Security Log, WAN DHCP Log, etc., click the appropriate link in the menu on the top.

6. To update the data, click **Refresh**.

### 6.5b/ SYSTEM-WIDE CONNECTIONS

You can view a summary of the monitored data collected for your Verizon Router.

*To view your Verizon Router’s full system status and traffic monitoring data:*

1. In the **Monitoring** section, click **System-wide Connections**.
2. To modify the connection properties, click the individual connection links.

3. To continuously refresh the page, click **Automatic refresh on**.
6.5c/ BANDWIDTH MONITORING

You can view and monitor the recorded bandwidth usage measured in Kbps.

To view the bandwidth:

1. In the Monitoring section, select Bandwidth Monitoring.
2. To refresh the page, click Refresh.
3. To continuously refresh the page, click Automatic refresh on.

6.6/ SYSTEM SETTINGS

You can configure various system and management parameters.

To configure system settings:

1. From the Advanced menu, select System.
2. In the *Router Status* section, configure the following:
   - **Verizon Router’s Hostname** – enter the host name or URL address of your Verizon Router. Both names are the same.
   - **Local Domain** – view the local domain of the network.

3. In the *Router* section, configure the following by selecting the check box:
   - **Automatic Refresh of System Monitoring Web Pages** – activates the automatic refresh of system monitoring web pages.
   - **Prompt for Password when Accessing via LAN** – causes your Verizon Router to ask for a password when trying to connect to the network.
   - **Warn User Before Configuration Changes** – activates user warnings before network configuration changes take effect.

4. In the *Session Lifetime* field, specify the length of time required before re-entering a user name and password after your Verizon Router has been inactive.

5. In the **Number of concurrent users that can be logged into the router** field, select the number of users that can access your Verizon Router at the same time.

6. Select **Remote Administration** to configure the remote administration to your Verizon Router.
7. Enter the Primary HTTP Management Port. Refer to 6.1h Remote Administration for using this feature.

8. In the System Logging section, configure the following system log options:
   • Enable Logging – move the selector to on to activate system logging.
   • Remote System Notify Level – specify the type of information, such as none, error, warning, and information, received for remote system logging.
   • Remote Security Notify Level – specify the type of information, such as none, error, warning, and information, received for remote system logging.
   • Remote System Host IP Address – enter the IP address of system log server for Security Logging messages.

9. In the DHCP Timeout section, specify the DHCP timeout.

10. Click Apply changes to save changes.
7.0 Troubleshooting Tips
7.1 Frequently Asked Questions
This chapter lists solutions for issues that may be encountered while using your Verizon Router as well as frequently asked questions.

Although the majority of the router’s internet connectivity is automatic and transparent, if an issue does occur accessing the internet (e.g. complete loss of connectivity, inability to access services, etc.), you may need to take additional steps to resolve the problem.
TROUBLESHOOTING TIPS

Note: The advanced settings should only be configured by experienced network technicians to avoid adversely affecting the operation of your Verizon Router and your local network.

7.0/ TROUBLESHOOTING TIPS

7.0a/ IF YOU ARE UNABLE TO CONNECT TO THE INTERNET:

• The first thing to check is whether your Verizon Router is powered on and is connected to the internet. Check the Router Status LED on the front of the Verizon Router. Be sure to refer to the “1.3a/ FRONT PANEL” on page 9 to determine status of the Verizon Router. Check the WAN cable connecting your Verizon Router to the internet to make sure it is properly connected on both ends.

• If the prior tips do not resolve your connection issue, try restarting (rebooting) the router portion of the Verizon Router by manually pressing the ‘red’ reset power button on the rear panel of the Verizon Router for 2-4 seconds (the Router Status LED should go off) to begin rebooting your Verizon Router. Your Verizon Router will begin rebooting and will return to service in 3 - 5 minutes depending on your network connection. Check Router Status LED and if it is solid white, try again to access the internet.

• If rebooting your router does not resolve your connection issue, try power cycling the Verizon Router by unplugging the power cable from the adapter or the wall and wait 2 minutes. During the 2 min. wait period, also power cycle the network device (e.g.
the computer, tablet, etc.) and then plug the power cable back into the Verizon Router. After 3-5 minutes, recheck the Router Status LED and try again to access the internet.

7.0b/ IF YOU ARE UNABLE TO CONNECT TO YOUR VERIZON ROUTER USING WI-FI:

- Be sure your Wi-Fi device is within range of your Verizon Router; move it closer to see if your connection improves.
- Check your network device’s Wi-Fi settings to be sure your device’s Wi-Fi is on (enabled) and that you have the correct Wi-Fi network and password (if using a Wi-Fi password) as configured on your Verizon Router.
- Be sure you are connecting to the correct Wi-Fi network; check to be sure you are using your Verizon Router’s SSID. In some cases, if using a Wi-Fi password, you may need to enter the Wi-Fi password into your network device again to be sure your device accepts the password.
- Check to be sure you are running the latest software for your network device.
- Try turning your network device’s Wi-Fi off and on, and try to connect.
- If you have made any changes in your network settings and turning your network device’s Wi-Fi off and on does not help, try to restart your network device.
- You may need to turn the Wi-Fi settings from on to off, and back to on again and apply the changes.
TROUBLESHOOTING TIPS

- If you are still unable to access your Verizon Router, you may need to try connecting to the Verizon Router using another network device. If the issue goes away with another network device, the issue is likely with that individual network device's configuration.

7.0c/ ACCESSING YOUR VERIZON ROUTER IF YOU ARE LOCKED OUT

- If your Verizon Router connection is lost while making configuration changes, a setting that locks access to your Verizon Router’s UI may have inadvertently been activated.

*The common ways to lock access to your Verizon Router are:*

- Scheduler - If a schedule has been created that applies to the computer over the connection being used, your Verizon Router will not be accessible during the times set in the schedule.
- Access Control - If the access control setting for the computer is set to block the computer, access to your Verizon Router is denied.

To gain access, restore the default settings to your Verizon Router.

7.0d/ RESTORING YOUR VERIZON ROUTER’S DEFAULT SETTINGS

There are two ways to restore your Verizon Router’s default settings. It is important to note that after performing either procedure, all previously save settings on your Verizon Router will be lost.
For additional information regarding the Restore Defaults feature, refer to section 6.1/ Utilities/Save And Restore.

- Using the tip of a ballpoint pen or pencil, press and hold the Reset button on the back of your Verizon Router for three seconds.
- Access the UI and navigate to the Advanced Settings page. Select the 6.1b Save and Restore option. After saving your configuration, if desired, click the Restore Factory Defaults radio button. For additional details, refer to the 6.1/ Utilities/Save And Restore section of this guide.

**Note:** If you reset or reboot your Verizon Router, you may also need to disconnect your Verizon Router's power supply for a few minutes (3 or more) and then reconnect the power cable. However, in order to provide full synchronization to the coaxial network, disconnecting and reconnecting the power may be required.

### 7.0e/ LAN CONNECTION FAILURE

To troubleshoot a LAN connection failure:

- Verify your Verizon Router is properly installed, LAN connections are correct, and that the Verizon Router and communicating network devices are all powered on.
- Confirm that the computer and Verizon Router are both on the same network segment.

If unsure, let the computer get the IP address automatically by initiating the DHCP function, then verify the computer is using
TROUBLESHOOTING TIPS

an IP address within the default range of 192.168.1.2 through 192.168.1.254. If the computer is not using an IP address within the correct IP range, it will not connect to your Verizon Router.

• Verify the subnet mask address is set to 255.255.255.0.

7.0f/ TIMEOUT ERROR OCCURS WHEN ENTERING THE URL OR IP ADDRESS

Verify the following:

• All computers are working properly.
• IP settings are correct.
• Verizon Router is on and connected properly.
• Verizon Router settings are the same as the computer.

For connections experiencing lag or a slow response:

• Check for other devices on the network utilizing large portions of the bandwidth and if possible temporarily stop their current utilization and recheck the connection.
• If lag still exists, clear the cache on the computer and if still needed, unplug the Ethernet cable or disable the Wi-Fi connection to the computer experiencing the slow connection and then reconnect or enable the Wi-Fi connection and try the connection again.

In rare cases you may also need to:

• Unplug the Ethernet cable to Verizon Router and restart the Verizon Router, wait 1-2 mins. and insert the Ethernet cable again.
• Under limited circumstances you may use a port forwarding configuration on the router, based on the application you are using (refer to the 6.0d/ Port Forwarding section or Verizon’s support online help for more details).

7.0g/ ROUTER STATUS LED

The Router Status LED provides a visual display of the Verizon Router’s current condition. Refer to the chart below for details.

<table>
<thead>
<tr>
<th>Condition Status</th>
<th>LED Color</th>
<th>Verizon Router</th>
</tr>
</thead>
<tbody>
<tr>
<td>Normal</td>
<td>WHITE</td>
<td>Normal operation (solid)\nRouter is booting (fast blink)\nSystem restart (fast blink)</td>
</tr>
<tr>
<td></td>
<td>BLUE</td>
<td>Pairing mode (slow blink)\nWPS pairing successful (fast blink)</td>
</tr>
<tr>
<td></td>
<td>GREEN</td>
<td>Wi-Fi has been turned off (solid)</td>
</tr>
<tr>
<td>Issue(s)</td>
<td>YELLOW</td>
<td>No internet connection (solid)</td>
</tr>
<tr>

FREQUENTLY ASKED QUESTIONS

7.1/ FREQUENTLY ASKED QUESTIONS

7.1a/ I’VE RUN OUT OF ETHERNET PORTS ON MY VERIZON ROUTER. HOW DO I ADD MORE COMPUTERS OR DEVICES?

Plugging in an Ethernet hub or switch expands the number of ports on your Verizon Router.

- Run a straight-through Ethernet cable from the Uplink port of the new hub to the Verizon Router.

Use a crossover cable if there is no Uplink port/switch on your hub, to connect to the Verizon Router.

- Remove an existing device from the Ethernet port on your Verizon Router and use that port.

7.1b/ HOW DO I CHANGE THE PASSWORD ON MY VERIZON ROUTER UI?

To change the password:

1. On the main screen, select Advanced, then select Users in the Utilities section.
2. Click the Edit in the Action column. The User Settings page displays.
3. Edit the user name and set a new password.
7.1c/ IS THE WI-FI OPTION ON BY DEFAULT ON MY VERIZON ROUTER?
Yes, your Verizon Router’s Wi-Fi option is activated out of the box.

7.1d/ IS THE WI-FI SECURITY ON BY DEFAULT WHEN THE WI-FI OPTION IS ACTIVATED?
Yes, with the unique WPA2 (Wi-Fi Protected Access II) key that is printed on the sticker on the rear panel of your Verizon Router.

7.1e/ ARE MY VERIZON ROUTER’S ETHERNET PORTS AUTO-SENSING?
Yes. Either a straight-through or crossover Ethernet cable can be used.

7.1f/ CAN I USE AN OLDER WI-FI DEVICE TO CONNECT TO MY VERIZON ROUTER?
Yes, your Verizon Router can interface with 802.11b, g, n, ac or ax devices. Your Verizon Router also can be setup to handle only n Wi-Fi cards, g Wi-Fi cards, b Wi-Fi cards, or any combination of the three.
**FREQUENTLY ASKED QUESTIONS**

**7.1g/ CAN MY WI-FI SIGNAL PASS THROUGH FLOORS, WALLS, AND GLASS?**

The physical environment surrounding your Verizon Router can have a varying effect on signal strength and quality. The denser the object, such as a concrete wall compared to a plaster wall, the greater the interference. Concrete or metal reinforced structures experience a higher degree of signal loss than those made of wood, plaster, or glass.

**7.1h/ HOW DO I LOCATE THE IP ADDRESS THAT MY COMPUTER IS USING?**

In Windows 7 or Windows 10, click the Windows button and select Control Panel, then click View Network Status and Tasks. In the next window, click Local Area Connection. In the Local Area Network Connection Status window, click Details.

On Mac OS X, open System Preferences and click the Network icon. The IP address displays near the top of the screen.

To find the IP address from the router GUI:

1. From the **Basic** menu, select **Devices** from the left pane.
2. Select **Expanded List** from the dropdown list to view detailed IP address information for all connected devices.
7.1i/ I USED DHCP TO CONFIGURE MY NETWORK. DO I NEED TO RESTART MY COMPUTER TO REFRESH MY IP ADDRESS?

No. In Windows 7, Windows 10 and OSX, unplug the Ethernet cable or Wi-Fi card, then plug it back in.

7.1j/ I CANNOT ACCESS MY VERIZON ROUTER UI. WHAT SHOULD I DO?

If you cannot access the UI, verify the computer connected to your Verizon Router is set up to dynamically receive an IP address.

7.1k/ I HAVE A FTP OR WEB SERVER ON MY NETWORK. HOW CAN I MAKE IT AVAILABLE TO USERS ON THE INTERNET?

For a web server, enable port forwarding for port 80 to the IP address of the server. Also, set up the web server to receive that port. Configuring the server to use a static IP address is recommended.

For a FTP server, enable port forwarding for port 21 to the IP address of the server. Also, set up the web server to receive that port. Configuring the server to use a static IP address is recommended.
7.11/ HOW MANY COMPUTERS CAN BE CONNECTED THROUGH MY VERIZON ROUTER?

Your Verizon Router is capable of 254 connections, but we recommend having no more than 132 connections. As the number of connections increases, the available speed for each computer decreases.
08 /

SPECIFICATIONS

8.0 General Specifications
8.1 LED Indicators
8.2 Environmental Parameters
The specifications for your Verizon Router are as follows.

This includes standards, cabling types and environmental parameters.
8.0/ GENERAL SPECIFICATIONS

Model Number: CR1000A

Standards: IEEE 802.3x, 802.3u, 802.3ab, 802.3bz, 802.3 an
            IEEE 802.11a/b/g/n/ac/ax

IP: IP versions 4 and 6

MoCA LAN: 1125 – 1675 MHz
          2500 Mbps

Speed: Wired:

          10GE WAN Ethernet: 100 Mbps, 1/2.5/5/10 Gbps auto-sensing

          10GE LAN Ethernet: 100 Mbps, 1/2.5/5/10 Gbps auto-sensing

          2.5GE LAN Ethernet: 10/100 Mbps, 1/2.5 Gbps auto-sensing

Wireless:

          2.4 GHz -
          IEEE 802.11b/g/n: maximum up to 600 Mbps
          IEEE 802.11ax: maximum up to 1.1 Gbps
5 GHz -
IEEE 802.11a/n/ac: maximum up to 2.2 Gbps
IEEE 802.11ax: maximum up to 2.4 Gbps
6 GHz -
IEEE 802.11ax: maximum up to 4.8 Gbps

Cabling Type:
- Ethernet 100BaseT: UTP/STP
  Category 5
- Ethernet 1000BaseT: UTP/STP
  Category 5e
- Ethernet 2.5/5/10GBaseT: UTP/STP
  Category 6a

Firewall: ICSA certified

8.1/ LED INDICATORS

Front Panel: Router Status LED
Rear Panel: WAN Ethernet and LAN Ethernet [3]
ENVIRONMENTAL PARAMETERS

8.2/ ENVIRONMENTAL PARAMETERS
DIMENSIONS AND WEIGHT

Verizon Router (unit only):

- Size: 4.72” wide x 9.85” high x 4.72” deep
- Weight: 2.96 lbs / 1.344 kg

Complete System (inc. packaging):

- Size: 10.71” wide x 7” high x 8.66” deep
- Weight: 5.51 lbs / 2.5 kg

Power:

- External, 12V, 5A

Mounting Bracket (optional):

- Size: 3.97” wide x 6.86” high x 6.6” deep
- Weight: 0.39 lbs / 175 g

Screws (optional):

- PH TP+N: 0.157” x 0.984”
- PE Anchor: 0.236” x 0.984”
Certifications: FCC, UL 62368, WFA
Operating Temperature: 5°C to 40°C (41°F to 104°F)
Storage Temperature: -5°C to 50°C (23°F to 122°F)
Operating Humidity: 5% to 85%
Storage Humidity: 5% to 93% (non-condensing)
9.0 Regulatory Compliance Notices
This chapter lists various compliance and modification notices, as well as the NEBS requirements and GPL.
Federal Communication Commission Interference Statement:

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
FCC Caution: Any changes or modifications not expressly approved by the grantee of this device could void the user’s authority to operate the equipment.

FCC regulations restrict the operation of this device to indoor use only.

The operation of this device is prohibited on oil platforms, cars, trains, boats, and aircraft, except that operation of this device is permitted in large aircraft while flying above 10,000 feet.

Operation of transmitters in the 5.925-7.125 GHz band is prohibited for control of or communications with unmanned aircraft systems.

**RF Exposure:**

To comply with FCC RF exposure compliance requirements, the antenna used for this transmitter must be installed to provide a separation distance of at least 31cm from all persons (indoor), and must not be co-located or operating in conjunction with any other antenna or transmitter.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
9.0b/ **Safety Warning:**

1. The circuit of cable distribution system under consideration is TNV-1 circuit.

2. The common sides or earthed side of the circuit are connected to the screen of the coaxial cable through an antenna connector of tuner and to all accessible parts and circuits (SELV, LCC and accessible metal parts).

3. The screen of the coaxial cable is intended to be connected to earth in the building installation.

9.0c/ **Alerte de sécurité:**

1. Le circuit de distribution par câble considéré est le circuit TNV-1.

2. Les côtés communs ou côté terre du circuit sont connectés à l'écran du câble coaxial via un connecteur d'antenne du syntoniseur et à toutes les parties et circuits accessibles (SELV, LCC et parties métalliques accessibles).

3. L'écran du câble coaxial est destiné à être mis à la terre dans l'installation du bâtiment.

The cable distribution system should be grounded (earthed) in accordance with ANSI/NFPA 70, the National Electrical Code (NEC), in particular Section 820.93, Grounding of Outer Conductive Shield of a Coaxial Cable.
Le système de distribution par câble doit être mis à la terre conformément à ANSI / NFPA 70, Code national de l’électricité (NEC), en particulier à la section 820.93, Mise à la terre du blindage conducteur extérieur d’un câble coaxial.

**9.0d/ NEBS (Network Equipment Building System) Statement**

An external SPD is intended to be used with CR1000A/CME1000.

**WARNING:** The intra-building ports of the equipment or subassembly is suitable for connection to intra-building or unexposed wiring or cabling only. The intra-building port(s) of the equipment or subassembly MUST NOT be metallically connected to interfaces that connect to the OSP or its wiring. These interfaces are designed for use as intra-building interfaces only (Type 4 ports as described in GR-1089) and require isolation from the exposed OSP cabling. The addition of Primary Protectors is not sufficient protection in order to connect these interfaces metallically to OSP wiring.
**Caution:** The Verizon Router must be installed inside the home. The Router is not designed for exterior installation.

**9.0e/ GENERAL PUBLIC LICENSE**

This product includes software made available under open source licenses. Additional information about that software, applicable licenses, and downloadable copies of source code, is available at:

https://verizon.com/opensource/

All open source software contained in this product is distributed WITHOUT ANY WARRANTY. All such software is subject to the copyrights of the authors and to the terms of the applicable licenses included in the download.

This information is provided for those who wish to edit or otherwise change such programs. You do not need a copy of any of such open source software source code to install or operate the device.
